## "A BIG IMPROVEMENT ON OS-9"

**DRAGONPLUS** — The best way to improve your Dragon OS-9 system at one stroke and continue to run all your existing software. Just run GO80 and get a fast professional 80 by 24 display as well as reclaiming the 6144 bytes of valuable user RAM taken by GO51. Loading the VDISK driver and the VO device descriptor gives a 240 sector RAMDISK which can be used in many different ways to speed up assemblies, compilations, file copying, loading big programs etc... especially useful if you only have one disk drive. Simple changes to STARTUP allow OS-9 to be automatically started with the 80\*24 display and RAMDISK.

OS-9 Drivers for DRAGONPLUS

only £5.75

## A BIGGER BETTER DRAGON

Upgrade your DRAGON with our DRAGONPLUS expansion and add an extra 64K of memory and a fast professional full size 80 by 24 video display with its own 2K video RAM. DRAGON 32s must be upgraded to 64K memory (upgrade service available).

Software now available for OS9, FLEX, DRAGON DOS and on cartridge.

Assembled and tested £103.50

(please state DRAGON 32 or 64)

Update disk for FLEX (with 80X24 and RAMDISK) £5.75

EDIT+ cartridge for DRAGONPLUS £15.00

EDIT+ disk (DRAGON DOS) £19.95

SPECIAL OFFER — DRAGONPLUS with FLEX/EDITOR/ASSEMBLER/DBASIC/EDIT+ £199.99

## FLEX is BEST

We make no secret of our support for FLEX (0\*9 fanatics may skip this paragraph). It's one of the most friendly and easy to use operating systems and has been popular with 6800 and 6809 users for many years. Our implementation on the DRAGON has autorepeat, 51 by 24 Hi-Res text screen with windows, true lowercase, redefinable character sets and still leaves a full 48K of memory free for programs and data and happily uses 40 or 80 track disks, single/double sided, single/double density.

It comes complete with a powerful text editor and one of the best 6809 assemblers available and gives you access to lots of good professional software.

Available for DRAGON DOS, DELTA DOS or CUMANA DOS 2.0 £86.25

Special Offer: FLEX/ED/ASM with DBASIC only £99.99

## DBASIC — DRAGON BASIC for FLEX

No you don't have to throw away or rewrite your BASIC programs when you move up to FLEX. Just start DBASIC and the DRAGON will run standard DRAGON BASIC programs and machine code tape programs. But that's not all — you can load/save programs, read/write data on FLEX disks, use the HIRES screen, send commands to FLEX. And there's a clever ERROR command that shows you exactly where your program went wrong. With 5 example programs plus a very useful cheque book balancing program donated by one of our satisfied customers.

DBASIC for Compusense DRAGON FLEX £30.00

## SP-EDIT — Wordprocessor with Interactive Spelling Checker

A friendly yet powerful full screen editor and wordprocessor. Turns your DRAGON into a wordprocessing system which shows you how the text will appear on the page and checks your spelling too. Ideal for writing anything from letters to books as well as programs. Automatic on-screen formatting, underline, bold, italics, superscript, subscript. Left/Right scroll for documents wider than screen. Complete with a 10,000 word dictionary (with utilities to modify the dictionary). Ready configured for DRAGON/DRAGONPLUS or Hazeltine 1500 Terminal and most printers — easily configured for other terminals and printers. Includes the BROWSE file display utility.

SP-EDIT for FLEX £75.00

## EDIT+

A must for every DRAGON owner. Gets you out of the rut of the 32 by 16 screen and the limited EDIT command. Allows BASIC to work with a 51 by 24 Hi-Res Screen and edit your programs with a full screen editor and comprehensive programmer's toolkit.

EDIT+ cartridge £34.45

EDIT+ disk (DRAGON DOS) £19.95

EDIT+ disk (for DRAGON FLEX/DBASIC) £19.95

## CROSS ASSEMBLERS FOR FLEX

For 6800/2 6801/3 6301 6805 6502 8080 Z80 — 6811 and 64810 available soon. All the features of the excellent FLEX 6809 assembler from £51.45 each

## MXT REAL TIME CONTROLLER

Interface your DRAGON 32 to the real world — 4 switch inputs — 4 outputs and a real time clock. 2 relay version £29.95. 4 relay version £36.95

## PRINTERS

QUENDATA 20 cps daisy wheel £205.85 CPA 80+ NLQ matrix £228.85

Full range available — from typewriters to laser printers

## CHATPLUS PLUS !!!! or CHATPLUS 2

Our resident communications expert has added even more features to our CHATPLUS communications program making it THE BEST MODEM PROGRAM for FLEX and soon for OS-9. Use CHATPLUS 2 to communicate with other computers, electronic mail and bulletin boards eg. ONE TO ONE, TELECOM GOLD, EASYLINK, PRESTEL (300 baud) and for OU students to send E-MAIL/TELEX/etc... Features include:

- 1) Autodial VOICE and DATA calls with suitable modems eg VOYAGER/DEMON
- 2) Autoselection of baud rate, parity/data bits
- 3) On-line directory of phone numbers and setups
- 4) 51 by 24 display or 80 by 24 with DRAGONPLUS
- 5) Off-line file preparation — transmit documents/files with a few keystrokes

- 6) Buffered and interrupt driven for speed and efficiency
  - 7) Support XON/XOFF on transmit and receive
  - 8) Supports buffer control codes for upload and download
  - 9) Any length file may be uploaded
  - 10) Any length file can be downloaded — direct to disk by using the optional XON/XOFF protocol
  - 11) Set any baud rate 50 to 19200 bps
  - 12) Half-duplex split speed possible eg 1200/75
  - 13) Toggle between popular bulletin board speeds and setups
  - 14) Set number of data bits 5/6/7/8
  - 15) Set parity: none,odd,even,mark,space
  - 16) Password protection — stops your passwords being displayed on screen
  - 17) Full documentation and user support
  - 18) Define Answerback for autologon
  - 19) Optionally view data received in HEX format for debugging etc.
- CHATPLUS 2 only £24.95 for FLEX — call for availability for OS-9

## \*\*\* NEW \*\*\* CHAT/Viewdata for the DRAGON 64 \*\*\* NEW \*\*\*

Access PRESTEL and Viewdata format bulletin boards at 1200/75 with full GRAPHICS (but not colour) using your DRAGON64 and a V23 modem. Screens may be saved and received offline.

Cassette £9.95 DRAGON-DOS £14.95 FLEX £14.95  
DEMON MODEM + cable + cassette only £84.00 with DRAGON DOS/FLEX disk £88.00

## CHATBBS

START YOUR OWN BULLETIN BOARD — call 01-882 8128 for a demonstration

## MODEMS for the DRAGON 64

NEW! NEW! The VOYAGER 7 and VOYAGER 11 modems are low cost and high quality multi-standard modems with full BT approval, autodial and autoanswer capability. V21(300/300) and V23(1200/75) originate and answer. The Voyager 11 has a professional 25 way D-connector interface to full CCITT V24 and upgrade options eg. Autoband rate scan, Full Buffering, Hayes Compatibility, V22, 110 volt/battery operation.

DEMON MODEM — autodial autoanswer V21/V23 BELL102/202 not BT approved. Works well with CHATPLUS. Excellent value and performance at a bargain price.

THORN VX543 intelligent modem — autodial autoanswer with speed match buffer V21 and V23 (originate only) — can be used with many computers and terminals

VOYAGER 7	£91.95	cable £9.50
VOYAGER 11	£114.95	cable £13.50
DEMON	£69.00	cable £9.50
THORN EMI VX543	£195.00	cable £13.50

many other modems available

CALL for advice and special offers on modem/cable/software packs

Modems and software available for a huge range of home and business computers

## ACCESSORIES

Best quality DUST COVER for DRAGON 32/64	£2.99
DUST COVER for DRAGON DISK DRIVE	£2.99

## How to submit articles

The quality of the material we can publish in  
*Dragon User* each month will, to a very great  
extent depend on the quality of the  
discoveries that you can make with your  
Dragon. The Dragon computer was launched  
on to the market with a powerful version of  
Basic, but with very poor documentation.

Articles which are submitted to *Dragon  
User* for publication should not be more than  
3000 words long. All submissions should be  
typed. Please leave wide margins and a  
double space between each line. Programs  
should, whenever possible, be computer  
printed on plain white paper and be accom-  
panied by a tape of the program.

We cannot guarantee to return every  
submitted article or program, so please keep  
a copy. If you want to have your program  
returned you must include a stamped,  
addressed envelope.

## News

Quickbeam 'Shaolin Master' update —  
Show report from Cardiff — Plus follow-up  
Show in Leeds — Microdeal to organise  
two conventions this year — Details inside  
— Plus Total Eclipse update . . . and more!

## Communication

Have you got a problem . . . then we want to  
hear about it. Send all your Dragon related  
queries to us and get results fast! Or maybe  
this is your chance to help someone out?

## Letters

Your chance to express your views to  
thousands of other Dragon Users. This  
month (amongst others) — more bulletin  
board numbers — update on OS-9 users  
group — the very last word on transformers  
— plus your letter (whoops . . . that's next  
month, isn't it?)

## People's Chart

This is it, the results of the first People's  
Chart, compiled by you, the Dragon User —  
plus your chance to vote in Chart Number  
Three. Vote! Vote! Vote!

## Expert System

They say everyone's an expert at some-  
thing — so why not try creating your own  
expert system, using this program by Peter  
Whittaker.

## Hardware

The new MXT controller, from Com-  
pusense, opens up vast new applications  
for your Dragon — from burglar alarm to  
teasmaid. Was Roy Coates impressed?  
Read on for details.

## Destructor!

The Earth is in peril — yet again — and  
naturally, only you can save it. Defuse the  
three bombs that are set to blow our world  
to bits . . . all in machine code from the  
keyboard of Steve Gathercole.

## Machine Code Tutor

Messrs Jason Orbaum and Geoffery  
Campbell continue our exploration into the  
world of machine code — this month  
discussing chip architecture and flow-  
charting.

## Software

Jason Orbaum's selection for this month —  
the good, the bad, the supremely indifferent  
— can you afford not to read this?

## Dragon Answers

More technical answers to a whole bunch of  
readers technical . . . and not-so-technical  
questions . . . from the keyboard of the  
awesomely knowledgeable Brian Cadge.

## Adventure Trail

Mike Gerrard collects the usual assortment  
of waifs and strays of the adventure world  
and puts them back on the straight and  
narrow. Tips galore . . .

## Firmware

All good things come to an end . . . and  
judging by the mail bag, this one has been  
particularly popular. The final instalment of  
the Dragon Firmware guide.

## Competition

Gordon Lee ponders the improbables this  
month and sets his usual brain teaser —  
which presents you with a chance to win a  
copy of Micro Vision's Beanstalk.

# Editorial

**ORDERING** goods by mail has always been a bit of a strange business. For  
a start, apart from the massive glossy household catalogues, the range of  
goods available via this strange transaction always seem to be — well — a  
bit out of the ordinary. Take a look at the classified ads in your Sunday  
newspaper. Whalebone corsets, Toupees and X-Ray specs . . . hardly run  
of the mill. Plus, if you think about it, the actual act of faith in sending some  
money off to a strange address and hoping something will come back  
seems on a par with expecting trains to run on time, or England to beat the  
West Indies. And when it does arrive — is it really what you wanted in the  
first place?

Luckily for us, actual crooks are very few and far between in the computer  
market, but as recent events have shown, delays that drag on for weeks and  
months cause unnecessary worry, are downright frustrating and (worst of  
all) cause a lack of confidence in the system that hits every company —  
good and bad. So what can the consumer do?

You can always read the reviews in *Dragon User* of course, but this is the  
area where shows come into their own. At a show, you can meet the people  
behind the companies. Look at the goods and form your own opinions, chat  
to other users. Even if you can't make it to a show physically, you can bet  
that if someone is exhibiting regularly, then they are run by enthusiastic,  
active Dragon supporters.

So, if there's a show near you, why not pay it a visit. In fact, you'd be daft  
not to. As the lawyers say, 'Let the buyer beware'.

## South Wales success

THE 'Dragon comes home to Wales' show, held on 15th February in Cardiff, was by all accounts quite a success — with a total attendance of around 700. Trade supporters included Blaby, Compusense, Computape, Datapen, Grosvenore, John Penn, Pamcomms and Peaksoft. "Everyone that came seemed happy," said organiser John Penn, "and we've already had quite a few nice letters." The event generated a great deal of interest — with people coming from as far away as Birmingham — and coverage from GWR Radio and the Western Mail.

So much so, in fact, that a repeat performance is already in the advanced planning

stage — this time to be held in the Leeds area, in the middle of May.

But in addition to the usual trade exhibitors, John is hoping to encourage users to come along and actually show the public what varied uses they can put to. "Radio communications, Model train controllers, that kind of thing," explained John. "We're trying to show people what can be done with their computers." He added, "We're continuing to support the Dragon in every way we can — trying to bring in all aspects of Dragon use — not just a roadshow."

Anyone who feels they have a project that might be of interest, contact John Penn on Bordon (04203) 5970.

## Eclipsed

FOLLOWING coverage of delays re the game Total Eclipse (Dragon User March 1986), West Midlands Consumer services were inundated with calls from disgruntled readers.

Although at the time of going to press, Eclipse were unavailable for comment, reports were coming in of the arrival of the game from all over the country. As soon as our copy arrives, expect a full review. Watch this (empty) space.

## Extra!

NEWS that will interest potential purchasers of Quickbeam's Shaolin Master — the game now has an extra bonus, a 'Challenge Screen' between bouts — but don't worry if you've already bought it. Quickbeam's Dave Hitchman is offering the upgrade to ex-

isting owners just for the postage. Send your tape back to them with the appropriate number of stamps and you'll get your upgrade, for no extra charge.

For first time purchasers, the price remains at £7.95 plus 50p P&P. Contact Quickbeam Software, 67 Old Nazeing Road, Broxbourne, Herts EN10 6RN.

## Hold the Bus!

ANDTEK Data Design are now offering a BUS Expansion available to the Dragon or Tandy colour computer user. Called Addbus it consists of a Buffer cartridge, and a compact, six slot, Expansion Unit. Cartridges can be mixed with Disk Interfaces, or used simply as a peripheral I/O Expansion Bus. The user is offered the choice of cartridge selection, from a digital switch, or under software control, either from cartridge or local program. Additionally an 8 bit I/O parallel Port configured as a Centronic

Printer Interface is a standard in-built feature.

Andtek's future plans include the release of an 80 column card, ROM Disk Card, and RAM Expansion, all with the enthusiastic upgrader in mind.

Addbus is offered as a set of P.C.B's, cartridge case, and constructors/operators manual, at £38.00. Also available fully built, and tested. For full details, please write to; Andtek Data Design, 41 Pebworth Road, Harrow, Middlesex HA1 3UD.

## Now Showing

YET more show news, this time from Microdeal, who are holding two 6809 Conventions, one in London in November, and one at CMIST in Manchester, to be held over the weekend of April 5th and 7th.

Apart from trade exhibitors (already 12 in number) a major feature of the convention will be a series of lectures (three per day) covering various aspects of 6809 computing,

supported by a panel of experts to service extended question and answer sessions after each lecture. Microdeal are also throwing open the doors to any user groups or adventure clubs that want to use the facilities. Entrance is expected to be £1.75 for adults, 75p for children. Said spokeswoman Jennifer Pope, "We're expecting to take Manchester by storm!"

For further details about accommodation, venue and availability of club space, contact Jennifer on (0726) 68020, or write to Box 68, St Austell, Cornwall PL25 4YB.

## Weekend away in Wales

IF YOU'RE still thinking about going to the Dragon 'Weekend in Wales' (see Dragon User Feb 1986) at the end of this month, you'd better make your mind up soon! Says event organiser Bob Morgan, "Bookings are going very well, but some places may still be available. We're looking forward to an exciting weekend." Bob is particularly looking for a few more experienced OS-9 users, so if that's your cup of tea, why not give it a try?

The event is to be held at the Trefeddan Hotel, Aberdovey in Gwynedd over the weekend of 21-23rd, with a variety of talks and demonstrations planned — including an appearance by our very own Brian Cadge on the Saturday.

The cost, fully inclusive of accommodation and board will

be £45 per person. Interested parties contact Bob at the Mid Wales Tourism Council on 0654 2654.

## Black Box

UNTIL recently, the major problem with converting joysticks for the Dragon has been that the actual conversion, no matter how careful, automatically invalidates the manufacturers warranty. However, those clever Peaksoft people have come up with a remedy, in the shape of a little black box, called the Dragoniser. The box just plugs in between the unconverted 9-pin Atari-type joystick and your computer — it's as simple as that...

Initially, Peaksoft will be supplying the Dragoniser only with the Quickshot II Autofire joystick — at an inclusive price of £14.95.

Contact Peaksoft at 48 Queen Street, Balderton, Newark, Notts. Tel (0636) 705230.

# Communication

Send in your questions, requests, and pleas to Communication, Dragon User, 12-13 Little Newport Street, London WC2

**Problem** I have acquired a copy of Speculator (Radio Shack for Tandy Co-Co), a spreadsheet in cartridge form. Is there any way I can get it to perform on my Dragon 32? I have no instructions for it, and every time I start it, I get the spreadsheet layout and an entry request. Pressing keys registers a very slow response, but I am unable to transfer data from the entry line to the spreadsheet. The Enter key generates a command error message. Can anyone help? Alternatively, is there a good spreadsheet or Database available on cartridge?

**Enquirer** Robert Brown, ISD, 17 Antrim Road, Lisburn, Co Antrim BT28 3AL.

**Problem** Pokes or routines required to disable List, Break key and Reset Button.

**Enquirer** Alan Burton, 11 Ingaway, Basildon, Essex SS16 5QR.

**Problem** Please help a Spanish boy who will be in your country six months. Where can I find a Dragon available to use or rent in London?

**Enquirer** Angel Vicente, 55

Riverside Gardens, King Street, London W6.

**Problem** Sometimes when I try to load a program the cursor disappears too soon and the program does not load. Could you please help me?

**Enquirer** David Paton, 8 Ardoch Park, Glenrothes, Fife KY6 3PT.

**Problem** I am searching any literature (books, issues) concerning the Dragon (tips, games) plus back issues of Dragon User: all 1983 and before, 1984 January, April, June. Can anyone help?

**Enquirer** Lemaire Jacques,

Rue Patenier, 46 B5000, Namur, Belgium.

**Problem** I can't get my Super Dragon Writer to drive a serial printer on my Dragon 64 via the serial port (Dragon Data Cartridge). Help please.

**Enquirer** Mathew Lodge, Maen Melin, Holmes Chapel Road, Lach Dennis, Northwich, Cheshire CW9 7SZ.

**Problem** Last Christmas I received a Touchmaster graphpad. After a lot of work, I eventually got my Cumana DOS Cartridge to fit into the Touchmaster expansion port, but to no avail.

When I use the multipaint program and try to save the graphics on disc, I get an FD error (Directory Full). Please can anyone tell me how I save these graphics on my Cumana Disc Drive?

**Enquirer** Andrew J. Golledge, Robin Hood Cottage, Pinfold Lane, Northop Hall, Nr Mold, Clwyd CH7 6HE.

**Problem** Is it possible to link a Dragon 32 to a EBSO/Centronics computer printer and use Dragon commands?

**Enquirer** James P. O'Connell, 8 Colombo Crescent, Weston-super-Mare, Avon BS23 4QA.

## Communication

Stuck for a routine? Need some obscure equipment? Feeling cut off? Fear not — someone, somewhere can help you! Write down your problem on the coupon below (make it as brief and legible as possible) together with your name and address and send it to Communication, Dragon User, 12/13 Little Newport Street, London WC2H 7PP. We'll publish it as soon as we can — meanwhile, maybe there's someone you can help this month!

## THE NEW DE-LUXE TOP VALUE LIGHT PEN FOR THE DRAGON 32/64

THE NEW ADVANCED PROGRAM  
for the Trojan light pens include the following facilities-

- \* DRAW BOX
- \* DRAW CIRCLE
- \* DRAW LINE
- \* DRAW PICTURES FREEHAND
- \* COLOUR FILL DESIGNATED AREAS
- \* SAVE AND LOAD PICTURES TO AND FROM TAPE
- \* FULL ERASE FACILITIES

All in Hi-Res screen in any of 4 colours for the Dragon 32/64.

Now available from exclusive  
distributors **MICRODEAL**

Use our 24 hour **MICROPOST** service by post to:

41 Truro Road, St. Austell,  
Cornwall PL25 5JE

By phone with credit card

0726 68020

- \* DATA ENTRY AND PROCESSING
- \* MENU SELECTION AND CONTROL
- \* GAMES PLAYING

This is a first class program which gives hints and tips on how to write programs for the pen. Ideal for many educational uses.

A top quality pen plus a first-class program.  
The best value pen package available.

**TROJAN**   
Micro Computer Software & Accessories

## OS-9 Update

I WAS rather surprised at the reply by Paul Grade to my original letter about forming an OS-9 User Group, as I had actually written to Paul, explaining to him that I did not intend to set up a rival group to the DUG. Our group are purely concerned with OS-9; we are not trying to compete with any other group, but rather to fill a void for OS-9 users.

Since my letter in October, we have successfully set up the group and we now produce a newsletter on Disk. The Newdisk supports a Public Domain Software library as well as the usual letters, articles, new and other items you would expect in a newsletter.

Our members are of all ages and come from many walks of life, with quite a number who are professionally involved in computing and are able to offer assistance to others. Our membership is mainly in the UK but we have two members in Belgium and three in Germany. We are hoping to affiliate with the US User Group in the States and thus broadening both Group's software libraries.

Our Public Domain Software Library currently has one volume (disc) completed, with another half completed. Because we distribute the PDL programs on the Newdisk every month, our members are able to keep up to date with the PDL programs and of course, it is very much more efficient for contributions coming in. We have some excellent routines which range from disassemblers to communications, file maintenance to utilities and we also have a patch to customise Stylograph and use it with an 80 (or any size) column terminal.

Our membership fees will be £10 per year which will include the price of the first disk. Then members are asked to send in the disk by the 20th of the month for the next issue. We currently have three newsletters (2 disk issues) and the 3rd Newdisk will be due at the end of February. If anyone is interested in joining us, then they only have to send me some blank disks for copies of the Newdisks which will tell them

more about us than a single letter can (return postage would be appreciated).

I would like to thank Dragon User, the Systems Engineers dept of Motorola in Scotland, Ted Opyrchal of Compusense, Drew Crane of Microware, Vivaway, Touchmaster and all the members who have helped me in various ways, whilst I was starting the group.

## Transform

THERE SEEM to be thousands of Dragon users transformed into ex-Dragon users by their transformers burning out. If this happens this is what you should do:

- 1 Take your faulty transformer into a radio repair shop.
- 2 Tell them to open it up by drilling out the rivets. (This is usually where the repair people get reluctant, but remember: what have you got to lose?)
- 3 Let them replace the fuse that has blown, most often the 12V one; usually, the actual transformer is in a beaming state!
- 4 Let them close the box with screws; the next repair will be so much easier!

DON'T try this yourself unless you're a professional. 240 volts is a killer. The whole job should take about half an hour and not cost more than £10.

PS If anyone is looking for Swedish/Finnish word processing software or software to access and download from electronic mailboxes, contact me!

Martin Vermeer  
Punahilkantie 4 B 14  
SF — 00820  
Helsinki  
Finland

**MANY THANKS for all the letters on the subject of transformers — the moral is that they can be repaired BY PROFESSIONAL, COMPETENT PEOPLE. The mailbag strongly advised against amateur meddling — a point that cannot be made strongly enough.**

**Of course, new or reconditioned transformers are now available from a number of sources — Blaby and Peaksoft to name but two.**

## Wordproc Pokes

I HAVE had a couple of letters from people wishing to use my "Wordproc" program with a printer other than my Seikosh GP100A. The alterations are moderately simple.

Double = code for double width print

Single + = code for double width cancel or single width/standard select.

POKE &H1185, DOUBLE  
POKE &H118B, SINGLE  
POKE &H11CB, SINGLE  
POKE &H11E2, SINGLE  
POKE &H11E9, DOUBLE  
POKE &H11F7, DOUBLE  
POKE &H11FB, SINGLE

The codes for double and normal text can be entered using the "special characters" key as described in the article. Double spaced lines can be obtained by first loading the program, and then entering: POKE &H14A,2:POKE &H14B,13:POKE &H14C,13. This will send an extra line feed to the printer each time.

Peter Whitticker  
Cambridge

## Tip Time

THIS IS the first letter that I have written to Dragon User so let me say what a great job you're doing keeping the Dragon 32-64 alive.

## Dragon to Dragon

BELOW ARE some good BBSs that cater for us Dragon users with modems. I'll list them with what I think are the best at the top and then in descending order.

Ring back (R/B) means that you dial the number and after it's rung once, you replace the receiver and dial again. When you get the carrier tone, turn your modem on and replace the receiver.

I have come across a routine of Poke's from Dragon World that might be of some use to the Dragon owners who have (or have access to) a printer. POKE &H168,&H80 (enter) POKE &H169,&HOF (enter) POKE &H167,&H7E (enter) To cancel the routine type POKE &H167,&H39 (enter). To re-start type POKE &H167,&H7E (enter). What this routine does is that everything that is typed to the screen is sent to the printer, (rather like a typewriter).

Also I am looking for a computer pen-friend who would be interested in programming and also exchanging hints, pokes, programs, etc.

John Scullard  
12 The Mount  
Teignmouth

## More Tips

MY TIP is, if you are like me and messing with machine code sometimes the program goes wild and usually its DragonDos that gets the worst end of the stick. To get it back just run this little program.

# Dragon User People's Chart

THIS IS what the Dragon world has been holding its breath for — the results of the first Dragon User People's Chart. The entries flooded in and the administrative minions were kept working long and hard until the results opposite were obtained.

Generally, the anagram attempts were of an amazingly high standard, but in the end we plumped for the solid but sincere, 'The Dragon is just great,' from D J Pott of Chittlehampton, North Devon. Many congratulations to him, and his prize will be winging its way westward very soon. And so to next month...

Each month we will be asking you to vote for your top five favourite programs on your Dragon (games, applications or utilities) and write them down in order of excellence on the form opposite (or copy it out if you don't want to damage your issue). And just for an extra incentive (as if you needed it), if you like you can construct a phrase or sentence using letters from the titles in your own top three — you don't have to use them all, just as many as you can. We will pick out our favourite, and he or she will be the recipient of £25 worth of software, donated by Microdeal. You can vote in the chart without making up an anagram, but you won't be in with a chance of winning a prize.

Send off your entry to: People's Chart, Dragon User, 12-13 Little Newport Street, London WC2H 7PP. Enter the People's Chart!

## Results February 1986

- 1 Shocktrooper..... (Microdeal)
- 2 Juxtaposition..... (Wintersoft)
- 3 Speed Racer..... (Microdeal)
- 4 Eddie Steady Go..... (Incentive)
- 5 Jet Set Willy..... (Software Projects)

## Chart Three

Voting for Chart No. 3 closes at 1pm on Friday 18th April 1986. Entries received after that time will not be eligible for inclusion in that month's voting. The editor's decision is final. Only one entry per individual per month will be allowed.

## WINTERSOFT PRESENT THEIR FIRST ADVENTURE WITH PANORAMIC GRAPHICS

THE BARONS OF CETI V are the eight fabulously wealthy owners of the distant planet Ceti V. Between them they control the Galaxy's richest source of cetite ore, the fuel for hyperspaceships.

THE JUXTAPOSITION is the

meeting point of two totally different universes, a semi-mythical line of dimensional instability thought to pass through Ceti V.

AS SERVITOR CROSS, Baron White's head troubleshooter, you face a daunting mission.

Far to Ceti's north, beyond the blue mountains, the unscrupulous Baroness Black is meddling with the JUXTAPOSITION's awesome power. Alone, you must travel the airless wastes of Ceti V, to discover the purpose of her secret experiments.

JUXTAPOSITION is the first in an epic new series of adventures from WINTERSOFT, creators of the widely acclaimed RING OF DARKNESS. Written 100% in machine code it features over 600 internal locations, a 4000 location planet, complete sentence input, and, with our spectacular PANORAMIC GRAPHICS system, nearly 32000 colour 3D views of the planet's surface.

Available on cassette for Dragon 32/64 price £6.95

# Any Questions?

*Construct your own personal expert system with this program from the keyboard of Peter Witticker*

IN THE Syllogy Expert program (*Dragon User*, March 1986) I demonstrated how the Dragon could be made to appear to understand English, and to draw conclusions from what it was told. However, interesting though that may be, it is not of much practical use in the real world. The program here presented is different, in that it has great potential use, the extent of which is only limited by the imagination of the user. For example, if your car broke down, it would be possible for the non-expert car mechanic to diagnose the fault in a matter of minutes using this program. The program would ask a series of questions, and depending on the answers given would be able to work out the fault. Similarly this program could help to diagnose an illness or to categorise an unrecognised animal.

## Binary

Start by entering and running Listing 1 'Datspurt'. This is a short expert system which will illustrate some of the principals and weaknesses of such systems. When run, it asks you to choose one of four possible causes for a car breakdown. Then it asks three relevant questions, and depending upon the answers makes its diagnosis. The program works by treating the series of answers given as a binary number (Yes = 1 No = 0), so that at the end of the sequence of questions we have a three bit binary value. This value is compared with the values required for the four known solutions to the problem. If a match is found it is printed out, and the program returns to the start again.

This works quite well, and although the program does not have any inbuilt ability to learn new solutions to the breakdown problem, it can be easily altered. If the questions are all answered 'Yes', the program will reply that it does not know what the problem is. Edit Line 230 to add "Ignition timing", 7 and change the loop in Line 150 from 4 to 5. The program will now come up with a solution to the situation. However, this is a very unsatisfactory solution, because it is difficult to expand the program's knowledge database. With three questions it can distinguish between eight different situations, but if we wish to add a ninth situation we must include an extra question. Doing this will change the answer values for all the other eight answers (from three bit values to four bits) and the database values will need to be recalculated.

This might not be too much trouble with three questions and eight situations, but by the time you have reached 10 questions

and over a thousand different situations the job gets out of hand. A second problem is that to find a solution, the program needs to ask all of the questions it knows, even if some of them are totally irrelevant. Added to this many of the possible answer combinations will never occur, so 10 questions might only distinguish between 20 actual solutions, and not the thousand possibilities. All of this makes the program very rigid, uninteresting to use, and removes all

chances of a short cut to the solution.

Listing #2, the 'Expert Learning System' overcomes these problems. Instead of relying upon rigid totals for all the questions asked, it generates a tree of related questions and answers. This means that it will ask only the minimum of possible questions to arrive at a solution, and that it can very easily learn and expand its knowledge database. The program makes use of three data tables. The first,

Listing 2

QUESTIONS\$, contains a list of all the questions the program knows, and these are numbered in ascending order as they are learned. The second, ANSWER\$, contains a list of all the possible answers known to the program, and these too are numbered in ascending order as they are learned. The third table, ARRAY(A,B), is the heart of the system, and contains the knowledge tree itself. This is used to link the questions and answers together. The left column of this array contains the data for a 'Yes' answer, whilst the right column contains that for a 'No'. If the number in the array is a positive number, then it is referring to another question, but if it is a negative number, then it refers to an answer.

First of all you will then be told to think of a car breakdown, and the computer will guess that it is a flat battery. If this is so, press <Y> and repeat the process. If the fault was not a flat battery, then press <N> and type in what the problem was (eg. 'empty petrol tank'). Then you will need to enter a question to tell a flat battery from an

empty petrol tank, and then to enter the answer to that question for each of the two outcomes. Once the question has been accepted, the program returns to the options display. The next time the database is questioned the program will start with your question and produce its answer depending on whether you answer 'Yes' or 'No'. Each time it gets the answer wrong, the program will ask for the correct answer, and a question to tell it from the wrong answer. In this way it slowly builds up a quite extensive knowledge database.

Once a database has been created it can be saved or loaded by pressing the <S/L> keys from the options screen. (This is currently set up for use with a disk system, but can easily be changed for use with cassette tapes.) The first thing the program saves (Line 720) is the initial question used as a prompt. This will ensure that the correct starting phrase will be used whenever the database is reloaded. To modify the program for use on a different subject, simply change the initial question and answer proved in Line 20 the first time

this new database is used. These modified values will be loaded back in whenever the database is reloaded.

The value of the expert system is not to be found in using it to help yourself, but in using it to help other people. If you know nothing about exotic birds, then you will not easily be able to set up a database about them. However, once you have set up a database on a subject with which you are well acquainted, this can very easily be accessed by a total novice to the field. The program will ask the questions you have entered, and will reach the verdict you would have reached, and if a new solution is found, the program will add it to its knowledge database.

The program is set up to distinguish between up to five-hundred different solutions, and can be modified to handle more. If you run out of string space try PCLEAR1 and increase the CLEAR command in Line 10. Once set up with a good database, the program should seem quite impressive to someone who does not know how it works.

## Original Software for the Dragon by COMPUTERWARE

£5.50

"Computerware present the quiz in an efficient and compelling way" — *Dragon User*, May '85

### BLOCKBUSTER QUIZ

A novel adaptation of the T.V. game suitable for 2 players. The game contains a mammoth 500 questions and answers covering a wide range of topics and varying in difficulty from easy to hard. Full colour high resolution graphics are used to display the board from which a player makes his letter choices and plots his winning path!

£5.50

"Linkword seems to be an excellent program, with much enjoyment to be had from it..." — *Dragon User*, May '85

### LINKWORD

The game is for 2 to 4 players, the object being to form words on the board and thereby score points. The computer automatically calculates all scores including double and triple word scores, 50 bonus etc. The game features colourful graphics with facilities for correcting mistaken spelling or exchanging difficult letters from the rack.

SHOW-JUMP

£6.50

"... a well written and thought out program" — *Dragon User*, December '85

100% machine code, full colour high resolution graphics, any number, of riders, nine different courses, numerous fence styles, continuous scoring, table of champions and jump-off against the clock, matching sound effects.

All prices include postage. Cheques, POs payable to:

# Getting in control

The new MXT controller opens up a new range of applications for your Dragon —  
**Roy Coates** checks it out

THE LATEST addition to Compusense's armoury of hardware for the Dragon is the MXT controller cartridge from Beam Electronics. The cartridge fits snugly into the Dragon's cartridge port and has integral legs to support the weight of the unit which is heavier than most cartridges owing to the weight of the relays that are encased within it.

The facilities offered by the cartridge include the ability to control up to four external devices (the controller is available in both 2 and 4 relay configurations) and to detect the condition of four input channels. A real-time clock is included in the package which enables the unit to be programmed to operate at set times which makes it suitable for many domestic applications such as heating control and lighting etc.

When the unit is plugged into the Dragon and the Dragon switched on, the program held on an EPROM within the cartridge automatically adds seven new commands to BASIC to enable the unit to be controlled

easily from a BASIC program. The new commands allow you to set the real-time clock, access the clock (for timing purposes), switch each of the relays either ON or OFF and determine the status of each of the four input channels.

The commands are:

**CLOCKSET** — Which allows the real-time clock to be set to the current time.

**CLOCKCHK** — Which displays the current setting held by the real-time clock.

**CLOCK** — Which allows a BASIC variable to assume the values held by the clock.

**SWITCHON** — Which allows one of the relays to be energised.

**SWITCHOFF** Which will de-energise an active relay.

**SWITCHIN** — Which will return the status of a selected input port.

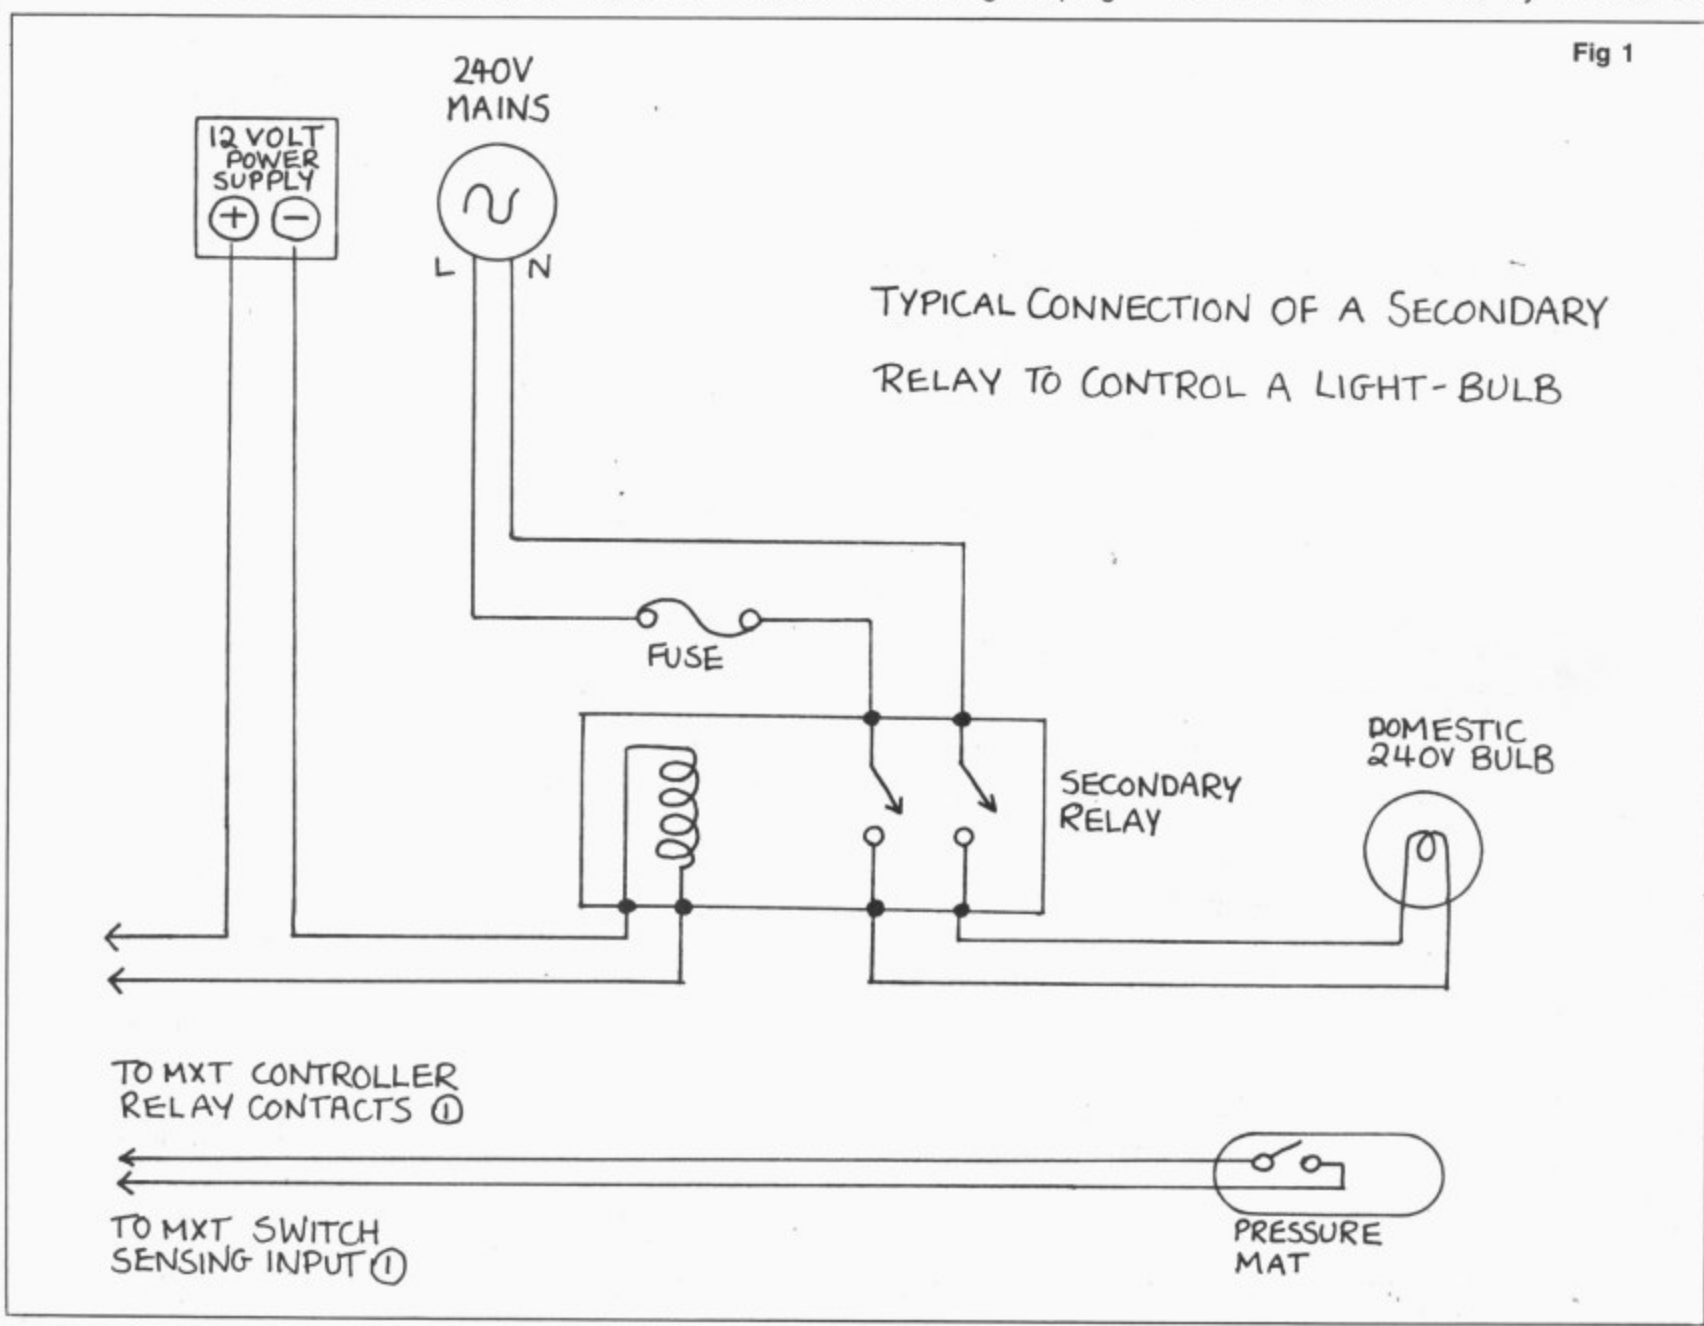

**MON** — Which activates the monitor program built into the cartridge.

The machine code monitor built into the MXT controller allows the assembler programmer to execute and de-bug his prog-

rams whilst the controller is present. The monitor is capable of examining and changing both the 6809's internal registers and user-specified memory locations, setting break-points to allow machine code program execution to be monitored at selected stores, execution of a machine code program itself, and finally a warm-start back to BASIC.

As with the added BASIC functions, the monitor commands are simple to use and easy to remember. The documentation supplied with the unit gives sufficient information on each of the new commands and some useful ideas and examples on how to implement them.

Care has obviously been taken in designing this unit for although the makers suggest that the clock should be accurate to within about two seconds a day, they give information on fine tuning the counters that control the clock itself. Three counters are employed and the most sensitive of these will alter the clock rate by a mere 0.1

seconds a day!!! (Apparently Dragon Data changed the main Crystal frequency in some of the earlier Dragons from 14.218Mhz to 14.31818Mhz, details for adjusting the clock to compensate for this are also given.)

Connections to the MXT unit are made by means of some very neat screwless terminals, these simply require a screwdriver to depress the spring-loaded assembly whilst the wire is inserted and this provides a secure connection to the cable.

## Relays

The relays used in this controller are rated up to a **maximum** of 3 Amps at 24 Volts DC and a **maximum** of 2 Amps at 240 Volts AC and it is worth mentioning that the manufacturers strongly recommend that mains voltages should not be switched by

the relays in the unit but by secondary external relays driven by passing a lower voltage through the relays of the MXT unit.

The MXT controller unit may be used for all sorts of applications from a simple burglar alarm system to the control of a model railway. A useful application would be the automatic switching on of a house light at a set time in the evening. (See Fig 1). The following program will switch a light on at 6pm (1800 hrs) and switch it off at 11pm (2300 hrs). The switching on of the lamp may be over-ridden by a pressure mat connected to input switch 1.

A buglar alarm circuit may be made up in such a way that all trigger switches are connected in series to one of the input sensors and the alarm bell triggered by a secondary relay driven from one of the MXT relays.

The uses to which this unit may be put are so varied that it would be impossible to list them all. It is well made and the price compares fairly with other such products on the micro-market. The software is simple to use and the unit appears to be quite reliable. The only reservation that I would have personally is that the power to drive a multiple relay operation may, in the long term, be too much for the Dragon's already weak power switch.

### Product MXT controller

**Micro Dragon 32**

**Price** 2-relay £29.95, 4-relay £36.95.

**Supplier** Compusense Ltd, PO Box 169, 286D Green Lanes, London N13 5XA. Tel: 01-882 0681.

```
10 REM PROGRAM TO SWITCH LIGHT ON AT 6PM AND OFF AT 11PM.
```

```
20 REM
```

```
30 REM
```

```
40 T=CLOCK(H)
```

```
: 'CHECK FOR 6PM.
```

```
50 IF T = 18 THEN 40
```

```
: 'IF NOT 6PM THEN TRY AGAIN.
```

```
55 IF SWITCHIN 1 = 0 THEN 40

```
: 'PRESSURE MAT OPERATED ??
```

```
60 SWITCHON 1
```

```
: 'ACTIVATE RELAY ONE.
```

```
70 REM NOW CHECK FOR 11PM TO TURN THE LIGHT OFF.
```

```
80 T=CLOCK(H)
```

```
90 IF T <> 23 THEN 90
```

```
: 'NOT 11PM SO TRY AGAIN.
```

```
100 SWITCHOFF 1
```

```
: '11PM SO SWITCH RELAY ONE OFF.
```

```
110 END
```

# DRAGON USER

## Newsagent Order

Make sure you get *Dragon User* every month by filling in this order form and handing it to your Newsagent. He can either reserve your copy of *Dragon User* for you to collect or have it delivered to your door. Either way, you won't miss out on all the news, views, programs and games.

### To Newsagent:

I'd like *Dragon User*

☐ Delivered to my house

☐ Held for me to collect

starting with  
the \_\_\_\_\_  
month's issue.

**DRAGON USER**

Your name \_\_\_\_\_

Your address \_\_\_\_\_

Dragon User is distributed by:  
SM Distribution  
16-18 Trinity Gardens  
London SW9  
Tel: 01-274 8611

# Countdown

Only ninety seconds to save the Earth — are you up to the challenge of this machine code game by **Steve Gathercole**?

THE INTERGALACTIC Federation has informed us that Earth is to be blown up to make way for a new Milky Way. Three bombs have been placed within the depths of the Earth, you have approximately one and a half minutes to destruction. Thank you for your attention.

To destroy the bombs you must first jump on your jet sled as it passes underneath you — use the right joystick fire button for this. Now you have complete control over the jet sled, so using the right joystick manoeuvre down to the righthand side of the screen and using the fire button blast away at the walls with your short range laser. Now get in at the bombs and destroy them. Unfortunately you must not bump into anything or you will lose one of your lives; this also applies if you get too close to the bombs.

Your score will depend on the bonus left at the end, which is calculated on the time left. This is then displayed in the Hall of Fame. A useful tip . . . press the fire button and move at the same time.

## Instructions

To load the game proceed as follows. First type in LISTING 1; the Basic "runner" for the game. Check all looks OK and save to tape as normal, but do not run this yet as it calls up machine code not yet in memory.

Next type in LISTING 2, the screen display (the machine code adds the rest). If all looks OK, save to tape directly after LISTING 1 using CSAVEM "SCRN", 1536,7679,6144.

Now switch off and then on (to clear memory) and type in LISTING 3. This is a hexloader for the machine code and is the same as used for Clayshoot and Torpedo, so if you already have this on tape you can use it again. When you run LISTING 3 you will be asked for the start address. Type in 20000 then press Enter — you will now be asked for the finish address. Type in 22908 then press Enter. Now you must type in the rows of hex digits up to but not including the "=" sign, (LISTING 4), then press Enter. You must now type in the checksum (the number after the "=" sign). Press Enter, and if all is well the next address will be displayed. Carry on as before, until the end.

When finished, save this to tape using CSAVEM "COUNTD",20000,22908,20000, saving this directly behind SCR.N. Rewind the tape and you are ready to go — type CLOAD then RUN.

If you want to type in LISTING 4 in small amounts, do this by typing in the finish address you want to finish at and save to

```

# Heart of the matter

*This month Messrs Orbaum and Campbell reveal the joys of chip architecture and flowcharting in part two of our series on machine code.*

LAST MONTH we showed you a small glimpse of the world of assembler programming. Before we start programming however, there are a few more things that form the basis of the programmer's world. Two in particular are processor architecture and flowcharting — in that order.

Processor architecture has nothing at all to do with Sir Christopher Wren, but then again it has very little to do with programming. It is, however, handy to keep in mind the way the processor deals with the instructions that it is obeying, as this way more efficient code can be written.

## Registers

The diagram in Figure One shows the internal structure of the 6809E, giving the relationships of all the registers and buses. The easiest way to think of a register is as another memory location. The same difference is that of speed — to access the contents of a register, the processor does not need to go outside the immediate environment. The registers all have different uses, as listed below:

**PC — Program Counter.** Used to point to the next instruction to be executed, and therefore 16 bits wide. Very rarely is this used by programmers. Although it is possible to change the contents, the results are tricky to control, and the desired result can usually be achieved in simpler and easier ways.

**S — System Stack Pointer.** A stack is a list of bytes, used for many purposes. The analogy of a stack of plates has been quoted in many other places, and is not strictly true, as the stack pointer can be changed to access bytes out of sequence. The pointer contains the address of the next free byte on the stack, and is updated whenever something is pushed to or popped from the stack. The system stack is used, as its name suggests, to store return addresses for subroutine calls. As the stack can be placed anywhere in memory, this register is sixteen bits wide.

**U — User Stack Pointer.** The 6809 is unusual amongst processors in that it has two stacks. The user stack is not used by the processor, and so it is safest to use the user stack for all your data, then if anything is left on the stack by a subroutine — normally fatal when it comes to time to retrieve the return address — the program runs all right. On the other hand, if this process is followed, the first indication that something is wrong comes when the stack has grown far enough to overwrite something important. On the whole we generally

ignore the user stack, but it can be useful on occasion.

**X and Y — Index Registers.** Like all processors, the 6809 has several index registers, for use in accessing memory. Unlike most, both indices on the 6809 can access the entire range of addressable memory — all 64k, if fitted. This is because they are 16 bit registers. They are used as an offset for accessing, for example, tables of data, but they have many other uses, as we shall cover later.

**DP — The Direct Page Register.** Memory is divided, nominally, into pages of 256 bytes. For speed, it is possible to specify which page operations are going to occur in, and then to have the address as an eight bit offset within this page. This is only really useful if there are going to be a large number of memory operations within a 256

byte area — for example sorting a small data table.

**D — The Accumulator.** The 6809 is also unusual in that it has a 16 bit accumulator. This is the register that is used for most of the arithmetic functions. It can also be used as two eight bit registers, A and B, for functions not exceeding 256.

**CC — The Condition Code Register.** This is best thought of as eight separate bits, as they are rarely accessed as a byte. Each bit serves a different function, and is used as a flag to show whether or not an event has occurred. We will deal with these separately as we come to them.

Many of these explanations will only become clear when addressing modes are covered at a later date.

The ALU is the Arithmetic Logic Unit, and executes arithmetic functions such as addi-

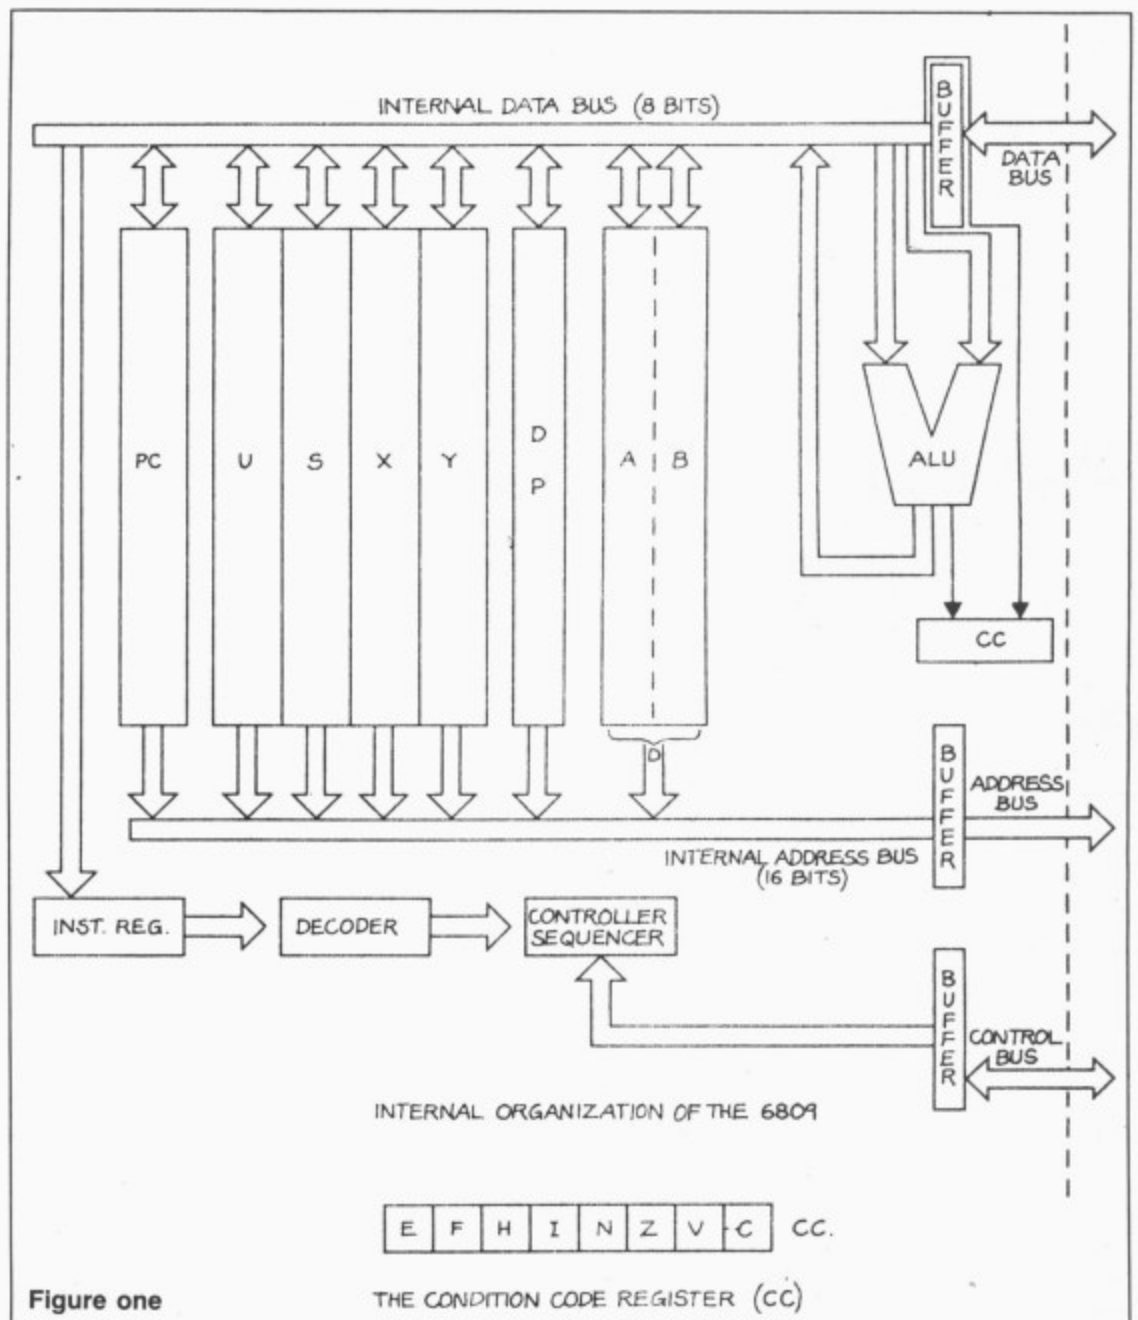

Figure one

tion, subtraction, and, surprisingly, multiplication, a function that normally needs implanting in software.

The data and address busses are both used for communication between various parts of the chip, and, through a buffer, with devices such as memory chips.

The controller sequencer is the bit that controls all the registers and the ALU, with help from the instruction register and the decoder.

Now on to a subject that has made grown men cringe, and is widely ignored by

programmers, analysts, consultants, and bus drivers, despite its relative importance. Yes, its flowcharting! Many people think this is only of use for very large programs, but with a language like assembler, where there are a large number of lines of code, it is often very easy to lose track of the overall direction of the program, when concentrating on a few lines at a time. Then a flowchart comes in handy. There are a multitude of symbols, courtesy of the boys at the ISO, but of these, only three are of any use — Process, Decision, and Start/Stop.

The basic principles of flowcharting are very simple. The most important thing is to be able to look at whatever is being coded as a whole, then break it down into manageable chunks in logical sequence. What a manageable size is depends on many things, including the size of the whole task, the programmer, the size of the finished flowchart.

The only guide it is possible to give is to say that the flowchart itself should not get out of hand.

The symbols are as follows:

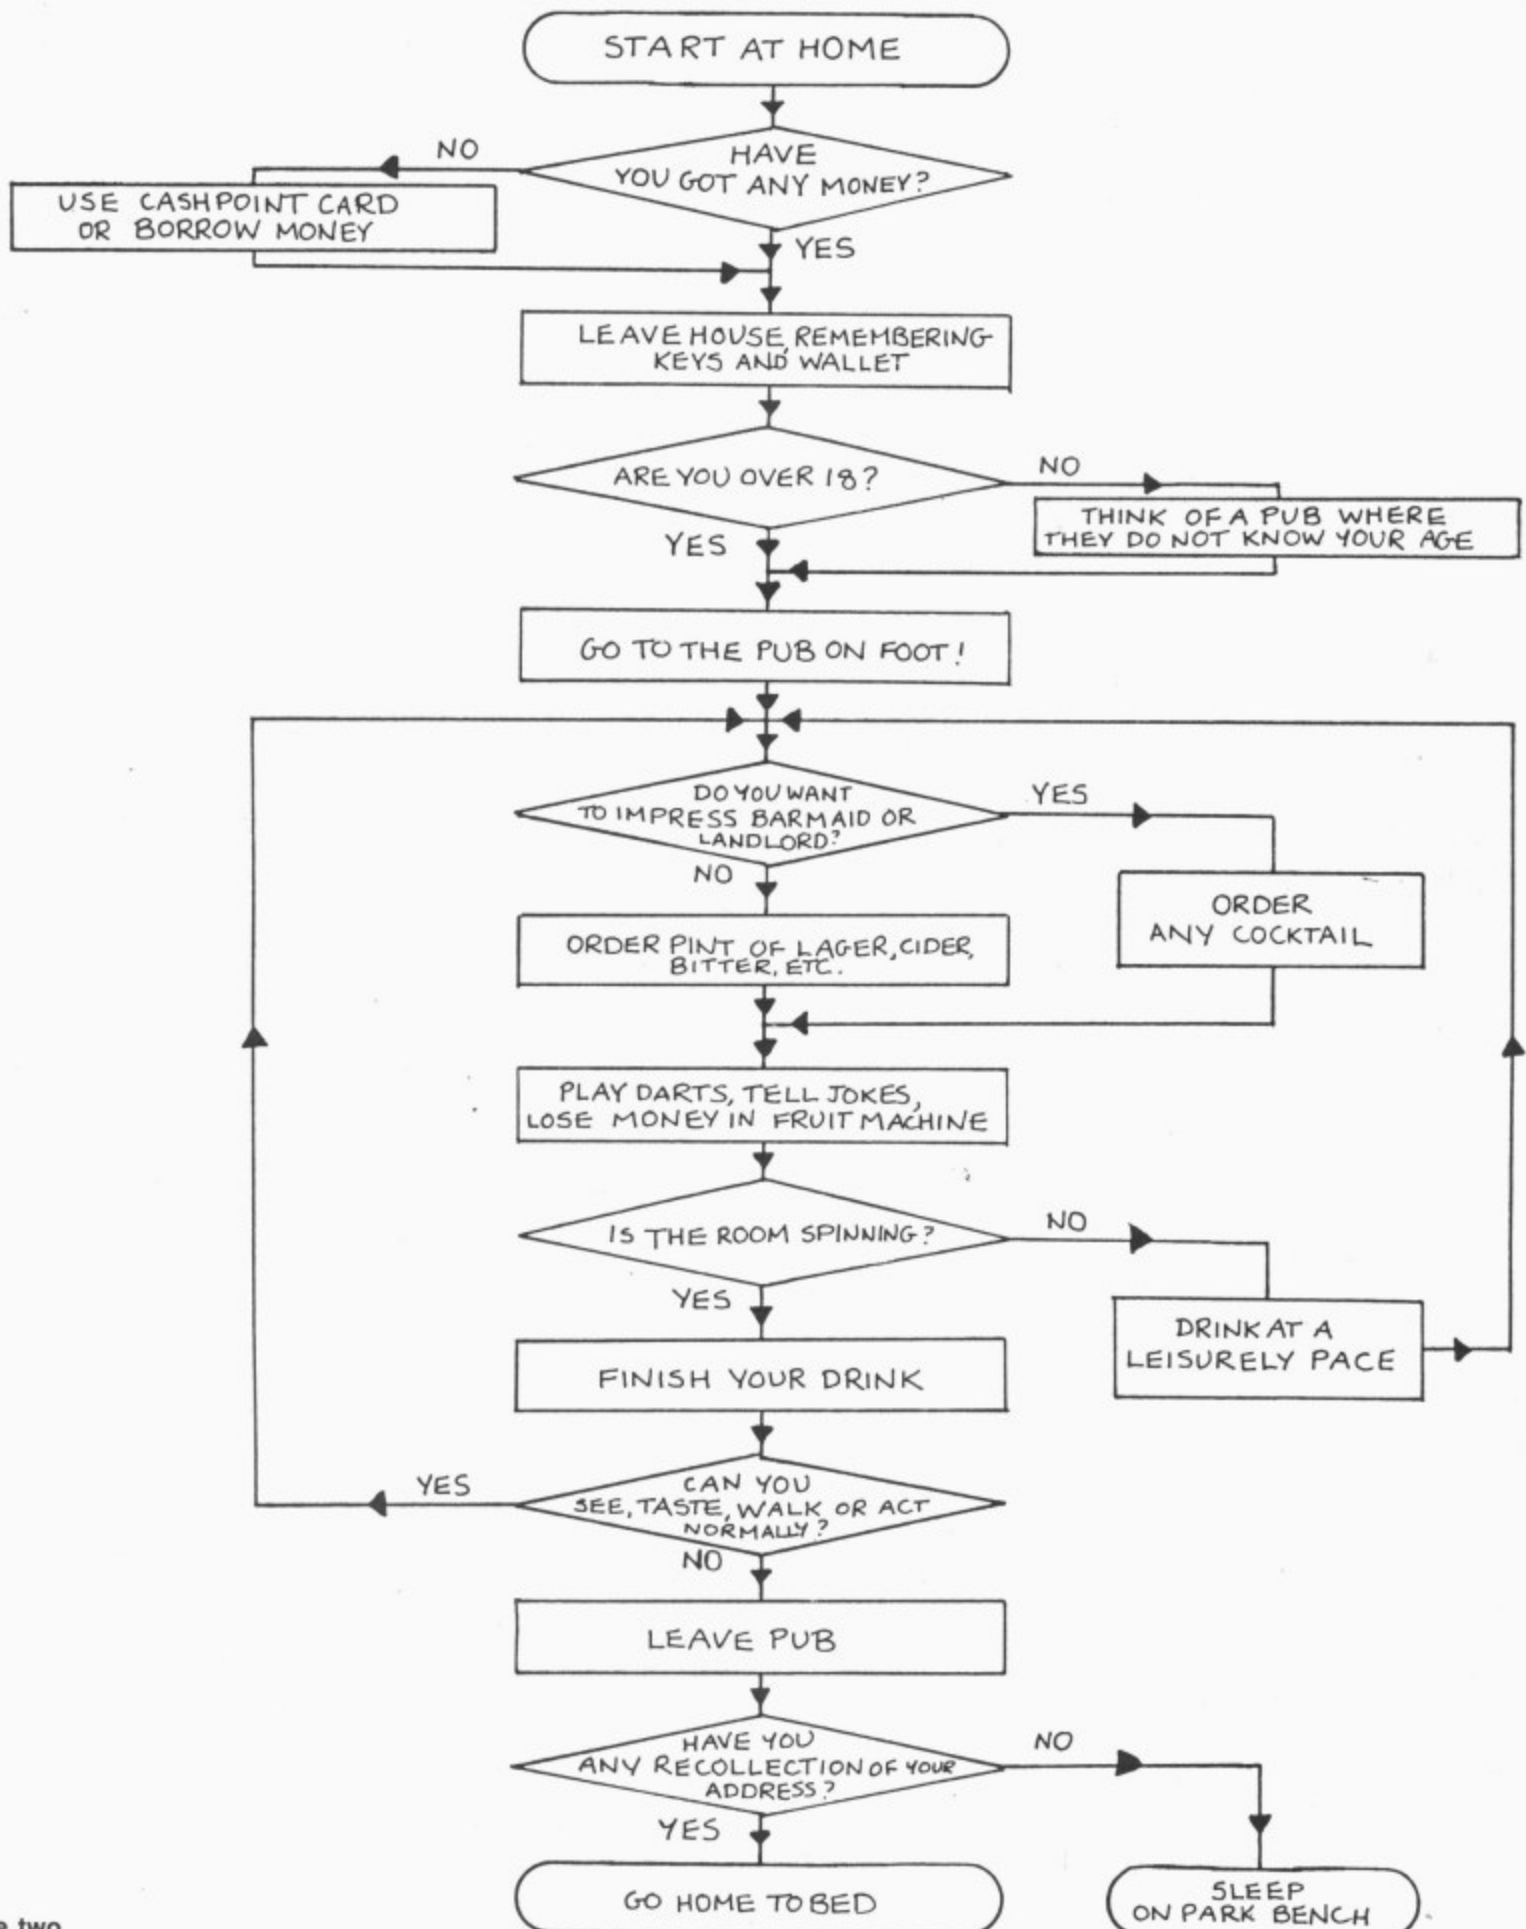

Figure two

1) Start/Stop. As it says; placed at the beginning and the end.

2) Decision. This represents a break in the program flow, and it is generally a good idea to keep these down to binary decision (ie yes/no), as this makes it easier to code.

3) Process. That is to say, everything else.

Figures Two and Three are two flowcharts we drew up as an example. The first, not totally serious, has nothing at all to do with programming (except in that it represents a process not totally unfamiliar to most programmers!), but should serve as a general example. The second is a flowchart for a program we will publish next month, to clear the screen in a slightly different way. More on that later after a closer look at Figure Two.

## Flowcharting

The first thing you will notice about the flowchart is that it is very easy to follow. This is one of the fundamental advantages to flowcharting a program. It is very difficult to get lost in the programming provided you have an adequate flowchart next to you.

We say adequate because we have seen someone try to write a *Defender* program from a flowchart with six boxes, which were "Show Instructions", "Initialise", "Play Game", "Man Dead? (Y/N)", "Print Game Over", and "Another Game? (Y/N)". This flowchart, as one can imagine, is of little use to anyone.

The drinking flowchart contains six decisions, ten processes, a start, and two alternative endings. All lines are arrowed (some more than once), all junctions have arrows on all lines entering junction as near to the junction as possible without causing confusion. All decision boxes have their exits clearly marked Yes and No.

All these things should be present on every flowchart, although on a code flowchart the start and end boxes should contain the words START and END respectively and exclusively. Study the first flowchart, understand it and its use, then go on to Figure Three. Look at it and try to understand it before reading on for the explanation.

Right, all those who didn't even glance at the diagram go back and do it again. Done that? Good. Now, the flowchart is very simple, having two loops, but it may aid understanding to realise that the Dragon text screen starts at location 1024 and ends at location 1535. All the routine does is to point to a position along each line (initially at the right hand end), store the address of that position in X (in this case the X register) and then use that as an offset to store a green square on screen. The pointer is then

Figure three

moved on to the next line, by adding 32, and the register is checked to ensure we have not reached the end of the screen. If we have, the position is reduced by one, and, if we have not reached the end of the line, the process is repeated.

## Glossary

Try to extend the flowchart so that it covers the screen in black that way, and then does the same in the opposite direction, in green. We will present a program next month that does so.

For now here are this month's additions to the Glossary of machine code terms.

**Accumulator** — A register within which most of the mathematical functions are performed within a machine code program.

**FILO** — First In Last Out.

**Flowchart** — A diagram designed to ease programming of part or all of a program. The flowchart consists of a series of standard symbols combined in a manner that makes them easily understood.

**LILO** — Last In Last Out.

**Register** — In crude terms, a faster 'variable' within the computer. A set of eight or 16 bits (defining a register as a one or two byte register) used for the manipulation of data within memory.

**Stack** — A pile of numbers! A stack works on a FILO principle, ie, the top number on the stack will be the one put their most recently.

Join us next month for the first-piece of actual code.

## SOFTWARE FOR DRAGON 32/64/128 AND DRAGONDOS/CUMANA DOS 2.0

Professionally written programs for home, clubs, and small business, with random access disk filing and our 42 x 24 screen with true lowercase.

### MONEYBOX Personal accounts £14.99

Controls income and expenses, for bank account, credit card, etc. Forecasting, budgeting. Optional VAT analysis for use as small business cashbook.

### MAILBOX Mailing list £16.99

Stores names, addresses and up to 10 user-defined fields. Selects records by multiple tests. Prints labels, letter-starts, prints or displays reports.

### SHAREBOX Stocks and shares £16.99

Prints or displays share valuations, capital gains, dividends and tax credits, income forecast, price changes, draws graphs of price trends.

### SALESBOX Sales Ledger £19.99

Balance brought forward with 4 debt periods. Can print statements, aged debt analysis, daybooks, labels, nominal code report. Can link to CASHBOX.

### BILLSBOX Purchase Ledger £19.99

Balance brought forward with 4 debt periods. Can print remittance notes, aged credit list, labels, daybooks, nominal code report. Can link to CASHBOX.

### CASHBOX Nominal Ledger £19.99

Double entry system posting debits/credits to up to 999 accounts. Prints trial balance, balance sheet, profit and loss, budgets, forecasts, audit trail. Can read SALESBOX/BILLSBOX files.

### STOCKBOX Stock control £19.99

Records sales, orders, deliveries. Prints low stock list, orders due, valuation, turnover, price list, stock movements. Can bulk change prices.

### ORDERBOX Invoicing £16.99

Prints invoices, etc, on plain or pre-printed paper. Can link to SALESBOX or STOCKBOX.

## Cop it!

**Program:** *Copta Snatch*. Blaby Software, Crossways House, Lutterworth Road, Blaby, Leicester.  
**Price:** £3.99

A few days ago I sat at my keyboard and said "Right, it's time to write this month's reviews. Perhaps before I do it though, I'll have a quick game of *Copta Snatch*, just to wake me up!" By about one in the morning, into my millionth game of *Copta Snatch* for that evening I was in no state to write my name, let alone a review of this superb game.

Strangely enough, the same thing happened the day before yesterday. I sat down, decided to have a quick go at this game, which, incidentally involves

flying a helicopter "Skramble" like (or to be more accurate, "Super Cobra" like), over a terrain defended by guns, laser turrets, force fields, etc, in an effort to reach the enemy's plans, and suddenly found it was some ungodly hour near dawn. The reviews still remained unwritten.

Yesterday, I sat down, loaded up the game with the best of intentions, played its Mode 24 flicker free graphics for several hours and completely forgot all my cares and my deadline, being carried away as I was in the crystal sound and smooth movement, and speed.

It's surprising, therefore, that after so much play, it should only have been tonight, after two and a half hours of hammering on the keyboard instead of using my Joystick because, you see, the sheer

speed of the game makes joystick control very difficult. I eventually got past the first force field and into the next stage of the game — a cave rather than just a landscape with new defenses, into which I managed to probe about three millimetres!

It's now five to eleven at

night, the deadline is the day after tomorrow, I'd better get someone to hide *Copta Snatch* now, thinking of which, I don't half fancy a game. No, no, I mustn't... Oh heck! What's a deadline anyway?

Jason Orbaum

## Rock steady

**Program:** *Draconian*, Microdeal, 41 Truro Road, St Austell, Cornwall, AL25 5JE.  
**Price:** £5.70 (inc P&P)

FOR MY second rave this month I have picked on Microdeal's *Draconian* which is a brilliant, inspired cross between *Sinistar*, *Trans-Am*, and *Time Pilot* that flourishes as an original and addictive game in its own right.

The game puts you in charge of a space ship which remains centre screen as the play field moves around it in the opposite direction to that in which you are pointing (a-la *Trans-Am* and *Time Pilot* and *Sinistar*). The idea is to free all humans within the galaxy. Each is held within an enemy base shown on the radar. A base consists of three or more force-fields enclosing one or more space people. The force fields are linked by generators and it is these which must be destroyed to remove the base.

Also in the galaxy, just to make things harder, are space mines, which, once shot, implode for a couple of seconds making it very easy to fly into their explosions which are as fatal to your ship as the mines themselves. The mines are accompanied by space rocks

which are really pretty feeble and easy to destroy — this makes it even more annoying when one is flown into!!

Also in the galaxy, just to make things even harder, are Dragons, which chase you and attempt to kill you in the traditional Japanese style (kamikaze). It only takes one shot to cause a Dragon to warp out but they return with all due haste.

The last enemy is the Draconian himself, so big, and so terrifying that he even shows up on the radar! He doesn't appear until quite late, at which point it's a good idea to get off the screen, providing you've rescued all the space people that is! When he does appear on the screen though, (and realisation dawns that his wing span is about ten of your ships... and that's one wing, and he's indestructable), most people just drop the joystick and their bottom jaw simultaneously and watch their ship vapourise on his hull leaving not a scratch.

What can I say, the graphics are stunning, the game plays at a comfortable speed which I initially thought was too slow, but is in fact just right, and the title page is almost worth the money for the game anyway!!

I have yet to finish section three (by which point the generators are shooting back!) but I will... I will...

Jason Orbaum

## Freaky Fables

**Program:** *Zak's Son*, Cable (via Computape), 27 Coombe Road, Southminster, Essex, CM0 7AH.  
**Price:** £2.99

ONCE upon a time, there was a happy, happy land, where Dragon Data still existed, where all the people were friendly and full of goodness and smiled even when it was raining and where the people were so primitive they still thought that *Pimania* was a good game. And all day long these happy, happy folk, sang jolly songs about life, love, and the legend of the dongle.

But also there dwelt in the land of Evil Wizard and he began to spread rumours that there was a land far away across the water where there was a machine with really good games called the Spectrum, for lo, there were no Spectrums in this happy, happy land. And then, the Evil Wizard turned his wicked hands and Dragon Data went bust and lo, all the people did panic and scream and try to sell their Dragons through the pages of the scroll known as "Popular Computing Weekly."

But all was not lost in the land for there also existed the Good Witch Cabbette who had

heard that one of these games for the Spectrum was a version of the arcade game mentioned in the legends of the elders called *Zaxxon* and lo, she said "Let there be *Zak's Son* so that all the little folk of the land can once more dance and sing and do all those happy sorts of things."

Word of her goodness had, however, reached the Evil Wizard and verily he was filled with wrath and he decided not to stop this spell of good, but to alter it, for lo, he was as cunning as he was evil, and that's pretty cunning, and verily he did speak these words... "Yes, let there be *Zak's Son*, but let it be boring, slow, and generally disappointing."

And lo, throughout the land adverts did appear on trees for *Zak's Son* and once more the people did dance and sing and sent off for their copies and behold, on the day after they had given up getting up early to meet the post it didst arrive on their doorsteps (for Sod's Law was still present in the happy happy land even if Sinclair were not). And lo, the people didst load the game into their Dragons, and lo, and it was not good.

And yea verily the moral is... Those who bring out totally unimaginative arcade copies deserve to receive cynical reviews.

Jason Orbaum

# KONG

of the hill!

The RAINBOW is the biggest and best magazine available for the TRS-80® Color, TDP-100, MC-10 and Dragon-32 Computers.

And no wonder! It's over 300 pages thick each month... pages brimming with programs, product reviews, tutorials, columns, hints and tips about your computer. Yes, it is considered "the" Color Computer magazine to buy.

Don't delay. For only \$28 you can get the Rainbow every month of the year. Then your CoCo will be Kong of the Hill too!

# BEAN STALKER

What about the parts the story tellers couldn't reach? After all, in Giantland, everything was bound to be larger-than-life. Jack would have come across human sized birds and insects as well as giant caterpillars which changed, at will, to and from the butterfly stage in their search for human prey.

In this up-to-date version of the well-known story, can you guide Jack as he collects golden eggs, harps, keys and even golden bananas? Help him to negotiate the beanstalk, spider's webs, stacked chairs and to swing across vines and chains in his quest to reach the top. Show him which lifts to use and which banks of cloud to hanglide through.

But beware! There are traps to fall into and tricks to be learnt in this all-action, machine-code, arcade/adventure game with its 60 screens of mystery and excitement.

(DRAGON 32/64)

**£7.95**  
including p&p

**MICRO VISION**  
SOFTWARE

8 WENSLEY RD, LIVERPOOL L9 8DW

Micro Vision is a new company dedicated to supporting the Dragon and its users by providing the highest quality software.

## Over Loading

PLEASE could you tell me if it is possible to load a graphics screen into another graphics screen leaving the first screen graphics on, but under the second screen. If you could help I would be most grateful.

Duncan Chambers  
30 Park Avenue  
South Shields  
Tyne & Wear

THE SIMPLEST method of loading one screen 'over' another, without resorting to machine code, is to use a program such as the one shown below. Basically, this loads one picture into the first four graphics pages, and the second into the next four pages. The 'GET' command is used to take a section of the picture from the second screen and store it in the array 'A'.

The 'PUT' command is then used to overlay this on to the picture on the first screen.

This method works fine in the two colour modes, but for four colour modes change the 'AND' in line 70 to 'OR'. The areas where colours overlap will give interesting effects.

```
10 PCLEAR 8
20 PMODE 4,1:SCREEN 1,1:
  COLOR 0,1:PCLS
30 CLOADM "PICTURE1": REM
  Load picture — Saved by the
  CSAVEM "PICTURE1",1536,
  7679,0 command
40 PMODE 4,5
50 CLOADM "PICTURE2", 6144:
  REM Load at offset
60 DIM A(1230):GET(0,0)-(255,
  191), A,G
70 PMODE 4,1:PUT(0,0)-(255,
  191),A, AND
80 GOTO 80
```

## Remote Control

I AM trying to write a machine code program to enable my Dragon 32 to be run entirely from a ADM3A terminal. The terminal has a 80 x 24 display and I would like to take advantage of this.

I have a Maplin RS232 port and have run a small program from Basic to check that the terminal will communicate with my Dra-

gon. I need to know where to place the code of the received character so that the Dragon thinks it is an input from its own keyboard, and also how to copy the output to the screen to the terminal. Hope you can help.

D. Pendleton  
103 Mersey Road  
West Bank  
Widnes  
Cheshire WA8 0DT

IT SHOULD certainly be possible to use a Dragon from a remote terminal (for text I/O only of course). One method is to patch the vectors at 362 and 359 which are the links for character input and output respectively. These are normally initialised to 'RTS' instructions. See the Firmware page in DU 11/85 and 2/86 for details of how to patch these routines.

## Multi Channel

FOR A while now I have been struggling with multi-channel sound output, (eg, Composer), via my Dragon's D/A converter. Although I can quite easily produce sound through one channel, I can find no way of outputting through more than this. Could you please help me with this problem?

Adam Law  
24 Farmington Road  
Benhall  
Cheltenham  
Gloucestershire GL51 6AT

A POINT much mooted by Dragon-bashers is the micro's sound capabilities (or lack of them). The Dragon has only one hardware sound channel (not counting single-bit sound) which is accessed via the D/A converter. Programs such as Mic-

rodeal's 'Composer' use a software technique involving producing mixed waveforms from the D/A — each 'channel' has a different waveform. The sound still only comes from one channel but appears to be in more than one voice.

The techniques involved are quite complex and the simplest solution is to buy a copy of 'Composer' which, after all, will produce stand-alone machine code.

## Type Writing

PLEASE could you tell me if there is a way of getting whatever is produced on the screen, also produced on the printer, without having to use #-2 in every print command. For example, the simple program below.

```
10 PRINT "DRAGON 32"
20 GOTO 10
```

I am asking this because at school I am taking a computer studies course, where I have to produce five programs written in BASIC, in the period of two years. But the program has to be produced as a listing and also as a RUN copy on the printer.

Please could you let me know whether there is a solution to my problem.

Neil Peet  
12 Newton Close  
Leyland  
Lancs, PR5 3TS

THE FOLLOWING short listing can be run prior to loading your programs, or added to the start of any of them. It causes a character sent to the screen to be echoed to the printer as well as the screen. You can still send characters to the printer only, by using PRINT

-2 as normal. The program can be disabled by typing POKE 359,57

```
10 CLEAR 200,32759
20 FOR I=0 TO 7:READ A:POKE
  32760+I,A:NEXT
30 DATA 13,111,39,1,57,126,
  189,26
40 POKE 359,126:POKE 360,
  127:POKE 361,284
```

## Making Contact

I OWN two Dragon 64s which I have linked together via the RS 232 ports in the following way: Pin 1 to 1, Pin 2 to 6, Pin 3 to 3, Pin 4 to 5, Pin 5 to 4, Pin 6 to 2, and Pin 7 to 7.

Firstly could you let me know if these are correct, and secondly could you please tell me how to send programs and data from one computer to the other as the DLOAD command only sets one computer to receive. I have tried the small programs given in the Dragon 64 supplement with no success.

Mr. P. C. Kinson  
8 Moreau Walk  
George Green  
Slough  
SL3 6RD

A SUITABLE lead for connecting two 64s together can be made by connecting the pins in the following way: Pin 1 to 1, Pin 2 to 6, Pin 3 to 5, Pin 5 to 3, Pin 6 to 2.

The problem with the DLOAN command is, as you have found, there is no equivalent DSAVE command. The format required is not simple and in general it is best to avoid trying to use it. With a lead made up as suggested above, the example programs in the supplement should work and can form the basis of a more sophisticated communications program.

## Whoops!

FINALLY, I have received a number of letters regarding my answer to John Booth in DU Jan '86. Many of you noticed my gaffe in using the variable FNS to hold the disc filename, this should have course read FS as 'FN' is a reserved word in Dragon basic and so its use as part of a variable name will cause a syntax error — sorry!

LET'S DEAL with some readers' letters first, before going on to some news which I know will interest lots of people who have written in to me in the past.

First out of the lucky dip is D Depree of 11 Sturry Street, London E14 6DB, who offers help to anyone stuck in *Trekboer* and *Juxtaposition*, but in return needs a favour himself... or possibly herself. DD has bought one of the Phoenix twin-pack games, where you have to discover a code from playing an arcade game before being allowed to play the adventure on the second tape. I never liked this approach, and DD has been unable to get through the arcade game, leaving an unstartable adventure. The pack was called *The Emperor Must Die*, so can any of you code-crackers or arcade addicts out there come to the rescue?

## Operation Safras

Plenty of you have completed *Pettigrew's Diary*, but as yet no one has claimed to have got through the second part, *Operation Safras*. "After answering all the questions on the note given to you by Rhythma," says Justin Field, "what is the code you have to enter to proceed?" Any help to me or to Justin at 2 Barnet Green, Hatfield, Doncaster, South Yorks DN7 4HL.

Help of a slightly different kind is needed by S J Gamble, 39 Plaistow Avenue, Hodge Hill, Birmingham B36 8HQ. It may well be psychiatric help, as the Gamble household thinks the Adventure Trail should be five pages long every month, but their real problem lies with *Franklin's Tomb*. The SAVE facility on their copy causes the program to crash, which I haven't heard anyone mention before. Has any reader encountered the same problem and found a way round it? Or maybe you've finished the game and would like to pass a copy on. The Gambles will manage to amuse themselves in the meantime as they're stuck in *El Diablero*, but who isn't? How to get to the cave in the cliff, and how to get the feather from the eagle they ask. Well, to rewrite my favourite Everly Brothers song: MAER DSIO DOTE VAHUO YLLA.

To prove that adventure playing can definitely be a family activity, just consider the Higgins home in Bootle, Merseyside. Philip's asking about *Pettigrew*, *Franklin* and *El Diablero*, while his brother is stuck in *Wings of War* and Dad has shown who's in

charge by just completing *Return of the Ring*. He found a bug in the program, as after managing to kill Gron, the program crashed whenever he tried to enter a village. Could be Gron's revenge, I suppose, being dealt out by his brother, Groff. Anyway, Higgins senior's advice is to forget Gron and take your gear to the Chamber of Time to get into the final stages which is a mini-adventure with "brilliant graphics."

*Juxtaposition* is the adventure that's dominating the postbag at the moment, not surprisingly, with satisfied customers galore — both those who've solved it and those who are struggling but still enjoying it. You'll probably know already from *Dragon User's* news pages that the sequel might be ready by Easter. Maybe Dean Douglas of Blackburn will have crossed the Blue Mountains by then. The way through is in the Brown Lands: TFAH SANW ODRE VIR AYB. A hint on the game from Frederick Jowett of Burnley, who's solved that and *Trekboer*, both of which he thought were excellent, though he says *Trekboer* didn't have as much behind it as he expected. Anyway, in *Juxtaposition* Frederick says that while you're outside the White City (I thought that was a dog track), you should enter any building you can as you might find something interesting.

## Franklin

Carl Truett is trying to find something interesting, and that's a copy of *Franklin in Wonderland*. You may recall that Salamander released a version of this without inlay and instructions for a fiver, but now it seems to have disappeared from the market, as indeed does Salamander. Microdeal are selling some of the former Salamander titles but not this one. Anyone with a spare, contact Carl at 11 Hayden Road, Rushden, Northants NN10 0HX.

Stephen Cogan of 674 King Lane, Alwoodly, Leeds LS17 7AR is keen on hearing from Dragon owners in the Leeds area, particularly adventure players, to see about setting up a club of some kind, so contact Stephen if you're interested.

I'd like to remind readers to enclose their address when writing, which M D Waller didn't, so his offer of help to people on several adventures is rather difficult to pass on! So was the answer to his question (a common one this) about getting past the

Nighteye Droid in *Juxtaposition*. You need a flash of inspiration on that one.

Help on *Juxtaposition* is available from Gareth and Geraint Edwards, and you don't need to be an adventurer to work out where they live. The address is 10 Harlech Court, Hendredenny, Caerphilly, Mid Glamorgan CF8 2TR. The brothers Edward say they'll advance saved games to a desired position if you like, or just help on any particular problem, provided you enclose sae, which of course applies when writing to anyone who's kind enough to offer help to other readers. Gareth and Geraint completed the game in 10 days, and two of those were spent trying to solve the puzzle of the caretaker, which I would have thought was one of the easiest of the lot, so it goes to show how different puzzles do fox different people.

If you're foxed in *Ring of Darkness* then some hints from Garrick Alder. He says that if you're thinking of buying a raft to get to the island, wait till you can afford to buy two, then put one on each shore in case you die and are reincarnated on the opposite side from where you left the raft. That's if you can't afford a hovercraft. Garrick also recommends the coward's way out in trying to deal with the monsters in the dungeons — break into the program and edit their strength to zero! Have my readers no shame?

More honest advice on *Return of the Ring* comes from Jonathan Harrop of Wantage, who says that at the start you must continually kill monsters to gain experience and raise your Gestalt Level, which causes the shops to sell more equipment, including the passes that you need. Also try trading with the monsters in the Forest Moon, as some of them give crystals away for nothing.

A couple of months ago I reviewed an adventure called *Castle Blackstar* and rated it very highly indeed. A little gremlin crept into the review, which publishers SCR Adventures have asked me to mention, and that's that the disc version is only available for the 64K Dragon, and not its little brother. It's good to know that at least one reader shares my enthusiasm for *Castle Blackstar*, and that's Pauline Hampson of 10 Cherry Lane, Lawton Heath, Alsager, Stoke-on-Trent ST7 3QZ. Pauline's completed lots of adventures, so knows what she's talking about, and she says the SCR effort "really

is incredibly good." So good that she's stuck and needs help... can the reader who told me about the adventure, and whose letter I can't find, help Pauline in any way? Or anyone else, for that matter.

Now for the news that I mentioned, which should please all those readers who have written in over the months asking if there is any hope of a tape version of *Colossal Cave Adventure* for the Dragon. Well at last there is, although inevitably it has had to be abbreviated just a little in order to cram it all in. Still, at least you'll be able to discover for yourself what everyone on virtually every other micro has known for ages — that *Colossal Cave Adventure* is the granddaddy of all adventures.

The storyline remains the same — can you enter the genuinely colossal underground cave network and retrieve the various treasures that are hidden in there? Getting into the caves isn't much of a problem, but map-making is essential if you're to find your way round and also get out again — that's once you've got past the first major obstacle, which is a giant green snake that rears up and hisses at you in the Hall of the Mountain Kings. Don't try and deal with it yourself, is my only advice on that one. The dragon is a different kettle of monster, though. You'll also meet a bear, a droll troll demanding a toll, a pirate who insists on pinching your hard-earned treasure and hiding it in the most devious of mazes, a clammed-shut clam, hostile dwarves that pop up out of nowhere and

throw things at you, and a host of other problems.

It's a pity that the lengthy location descriptions, which were one of the attractions of the original, have had to go, but with the Dragon's bulky text display (not redefined) it's maybe just as well as some of them would take up several screens. However at least you do get a look at this most famous of all adventures, and if maybe a few of the problems and their solutions seem familiar (like the bear and our old friend the burning torch) then remember that these were the originals. There's a score but no save routine, which is also as it was in the original mainframe version.

One practical tip — I had loading trouble

with the game till I eventually turned the cassette volume down very low indeed. The only other tip is to give the game a try by sending £6 to Cowen Software Ltd, 23 Bristol Avenue, Levenshulme, Manchester M19 3NU. And that's the end of the colossal adventure column for another month, except to say that I've recently been given a sneak preview of a kind of arcade-adventure game written by one of our readers and which Microdeal will be publishing in the near future. I'm sworn to secrecy about it, but I will say that it's brilliant, with more packed into the program than I would have ever thought possible. I'm dying to write about it, but you'll have to wait till my lips have been unsealed.

## Adventure Contact

To help puzzled adventurers further, we are instituting an Adventure Helpline — simply fill in the coupon below, stating the name of the adventure, your problem and your name and address, and send it to Dragon User Adventure Help-

line, 12/13 Little Newport Street, London WC2H 7PP. As soon as enough entries have arrived, we will start printing them in the magazine.

Don't worry — you'll still have Adventure Trail to write to as well!

## Adventure Contact

**Adventure Syzygy Problem** I have all the co-ordinates, but how do you use them at the transporter? Also, how do you get to the planet? **Name** Clayton Poole **Address** 58 Castle Drive, Northborough, Peterborough, Cambs, PE6 9DL.

**Adventure Black Sanctum Problem** Please could anyone supply me with a list of the commands? Also, how do I get out of the rugged mountain? **Name** John Scullard **Address** 12 The Mount, Teignmouth, South Devon, TQ14 8NZ.

**Adventure The Ket Trilogy/ Final Mission Problem** How do you get past the second door after spraying the aerosol? **Name** Eifion Llewelyn **Address** Maes-yr-odin, Park Road, Ynystawe, Swansea, SA6 5AP.

**Adventure Juxtaposition Problem** How do you kill the night-eye droid? Is there a hint sheet? **Name** Steven Slade **Address** 37 Waterloo Road, Bramhall, Stockport, Cheshire, SK7 2NS.

**Adventure Barons of Ceti V Problem** I can't get away from the JKL assassin droid, or past

it. **Name** Phillip Dew **Address** Rosellou, Winchester Road, Waltham Chase, Southampton, Hants.

**Adventure Ring of Darkness Problem** Any help please **Name** Karl Carrier **Address** 54 West Ham Close, Basingstoke, Hants, RG22 6PH.

**Adventure Jerusalem Adventure 2 Problem** How do you be religious at Western Wall? What are the magic words? When do you use them? **Name** John Haining **Address** Arranview, Somerville Street, Catrine, Ayrshire, Scotland, KA5 6SQ.

**Adventure Juxtaposition Problem** I cannot get past seemingly multiplying JKL assassination droid. Please tell me how I can do this — if possible send hint sheet. **Name** Simon Goodwin **Address** 15 St Stephen Rd, Penketh, Warrington, Cheshire.

**Adventure Sea Quest Problem** Getting Scuba gear from the Clerk **Name** Gareth Ashenhurst **Address** 49 Fosseyway, Syston, Leicester, LE7 8NF.

**Adventure Syszyg Problem** Don't know how to beat Voder.

Can't set co-ordinates right. Can anyone help? **Name** Stuart Gillicott **Address** 65 Yewtree Cres, Melton Mowbray, Leicestershire, LE13 1LN.

**Adventure El Diablero Problem** Where to dip the twig **Name** Gavin Griffin **Address** 58 Did Bawn, Tallaght, Co Dublin, Eire.

**Adventure Madness and the Minitor Problem** Everything **Name** Gavin Griffin **Address** 58 Did Bawn, Tallaght, Co Dublin, Eire.

**Adventure Juxtaposition Problem** Cannot get the white key card off the caretaker and cannot find the mask. **Name** Mark Coops **Address** 16 Wil-lows Drive, Meir Heath, Stoke-on-Trent, ST3 7LZ.

**Adventure Juxtaposition Problem** Have sender unit and deeds of Brown, but always die from Brown Fog. Can someone send a map? Also what use is cryobelt and Transmat receiver? **Name** David Eggel-den **Address** 9 Tithe Road, Chatteris, Cambs, PE16 6SL.

**Adventure Return of the Ring Problem** How to get the grain out of the human village. **Name**

Steven Atkins **Address** 306 Berecroft, Harlow, Essex, CM18 7SH.

**Adventure Juxtaposition Problem** How do you get out of the first building without being shot by the first droid? **Name** Richard Tylar **Address** 11 Madema Park, Tunbridge Wells, Kent, TN2 5SX.

**Adventure Return of the Ring Problem** We can't get the blue pass to get out of the maze at the beginning. **Name** Emma Breedon **Address** 21 Welbeck Road, Yeovil, Somerset.

**Adventure Juxtaposition Problem** How do I get out of the Emerald Tower with the Emerald? What use is the girl in the lasertheque? **Name** S N Thompson **Address** Fird View, Brize Norton, Oxon, OX8 3PU.

**Adventure Ring of Darkness Problem** How do I get the key off the Jester? What do I do when I have the four rings? **Name** Paul Gibbons **Address** 23 Crosslands, Caddington, Luton, Beds, LU1 4EP.

**Adventure Trekboer Problem** Cannot pass the force field **Name** J Wright **Address** 31 Oak Way, Cleethorpes, South Humberside, DN35 0RA.

# MORE TERRIFIC PEAKSOFT SCOOPS!

## PRISM MODEM 1000/2000

Come and join the fun on Micronet and Prestel!

There are now FOUR HUNDRED THOUSAND pages to explore, offering inter-active games, nationwide "chat" lines, advice on computer problems, tele-shopping, a micro market, electronic bank accounts, your own computer mailbox... the list just goes on and on.

The Prism Modem uses your phone line to link your Dragon to special mainframe computers throughout the country — the special cheap call rate costs just 40p an hour.

OUR BREAKTHROUGH PRICE IS JUST £64.95 complete with all leads and "plug-in-and-go" cartridge software, and including a FREE 3-month subscription to Micronet/Prestel.

PLUS — A PEAKSOFT EXCLUSIVE! We're compiling a Dragon-only Prestel directory, to help you get in touch with Dragon fans everywhere. Every Peaksoft modem customer can receive a FREE copy. (If you're already on Micronet, check page 323000191 for details, and other Dragon news.)

**ONE DAY EVERY HOME WILL HAVE ONE  
— WE'RE OFFERING YOU THE FUTURE!**

00 00 00 00

### TOUCHMASTER GRAPHICS TABLET with FREE GAMES worth over £39!

We've slashed almost TWO-THIRDS from the Touchmaster's original price of £149! It plugs into your Dragon's cartridge port, allowing you to draw, and save, incredibly detailed pictures in any available colour, using the supplied stylus. There's a through port, so disk drives can still be connected.

If you saw the review in last month's Dragon User, you'll know just what a stupendous product this is!

OUR INCREDIBLE PRICE IS ONLY £49.95 + £3 CARRIAGE/INSURANCE! And as part of this super deal, we even include 5 dedicated Touchware games, worth over £39!

00 00 00 00

### TATUNG TP100 DOT MATRIX PRINTER

This is the one we use — that's how highly we recommend it! Just look at these incredible features!

★Standard friction AND tractor feeds ★Graphics ★Elite ★Pica ★TRUE descenders ★Condensed ★Large lettering ★Subscript ★Superscript ★Italic ★Foreign fonts ★Proportional ★Underlining ★Double strike (better than some pricey printers' "near letter quality"! ★100 letters-per-second printing ★Epson compatible ★Standard ribbon obtainable from office supply shops.

**But we've saved the best news to last —  
WE'RE OFFERING THIS INCREDIBLE  
PRINTER FOR JUST £199.95  
INCLUDING A FREE DRAGON LEAD!**

00 00 00 00

PEAKSOFT BRAND NEW HEAVY DUTY POWER SUPPLIES £14.95. Transformer only, £11.95. Check around — you won't pay much less for "reconditioned" units!

GENUINE DRAGON DATA DISK DRIVE COPPER-BOUND INTERNAL POWER SUPPLIES. £14.95. We tracked down the last in the country and bought the lot! Safeguard the future use of your disk drive while stocks last!

LEADS: cassette £2.50, aerial £2.50, printer £11.95. DUST COVERS £2.95.

BINDERS for 12 Dragon Users: £4.40 (Supplied unmarked, with self-adhesive blank label.)

QUICKSHOT 2 AUTOFIRE with DRAGONISER £14.95. Unlike many conversions, our unique Peaksoft Dragoniser does NOT invalidate the joystick manufacturer's guarantee. Recommended for arcade game use.

★★NEW★★ COMPETITION PRO-5000 with DRAGONISER £21.95. When only the best will do — the ultimate, Kempston-designed, micro-switched joystick. Recommended for arcade game use.

PRO-STICKS £9.95 pair, £5.50 each. Genuine twin potentiometer floating joysticks, suitable for ALL Dragon games. (This type is necessary for Tim Love's Cricket and Worlds of Flight.)

To order: Just note your name, address, computer and goods required on the back of your cheque or postal order. Access/Visa card-holders may phone their order to 0636 705230 at any time, day or night. Prestel subscribers may leave credit card orders in our mailbox — 636705230. All goods except the Touchmaster are POST FREE. We supply by return of post, subject to availability. Personal callers welcome — please phone first so that we can have your order ready. CASH ON DELIVERY on all orders over £40 — please send at least £5 deposit and pay the balance to the postman (sums over £50 must be paid at your local Post Office).

BOUGHT A DRAGON!**

## BERND KNECHTEL SOFTWARE

the company which only produces good machine code tools and utilities for your Dragon instead of worse games, proudly presents:

### DISK SUPPORT TOOL 1.5

A must program for every Dragon user with Disk Operating System. [\* ,D] — £15.

### LOGO EXTENSION 3.3

Use the graphic features of the language Logo from your Dragon Basic (with its own fast arithmetic routines, it doesn't use the slow ROM routines). [\* ,D,C,I] — £15

### COMMUNICATION SOFTWARE 1.0

The by all means necessary aid to do any kind of serial data transmission. [\* ,D,C,I] — £5

### EQUAL CHECKER 1.0

The program to overcome all typing errors. You'll enter a new world of string comparison. [\* ,D,C,I] — £10

### TASK MASTER 1.2

Multitasking for your own programs, little machine code knowledge required. [\* ,D,C,I] — £10  
\* = send SAE and two international answercards for further details. D = available on disk.  
C = available on cassette. I = free assembler source listing supplied with the program to allow you to make your own changes and to use it easily from your own programs.

**How to pay?** Add £2 to your order for postage and packing (by air mail) and remit the money (pounds sterling) to my account in West Germany:

Country: West Germany, bank name: Volksbank Remscheid, counting code: 340 600 94, account no.: 10 81 688 0, account owner: Bernd Knechtel.

Please state on the remittance your name and address and send a separate letter with your order to: Bernd Knechtel, Arnold-Wilhelm-Str. 9, 5630 Remscheid 11, West Germany.

(Nottingham 640377)

## SPRITES FOR THE DRAGON

- ★ UP TO 128 NON-DESTRUCTIVE SPRITES
- ★ SIZE SINGLE PIXEL TO 1600 PIXELS
- ★ COLLISION DETECTION
- ★ AUTOMATIC ANIMATION
- ★ AUTOMATIC MAZE RUNNING MODE
- ★ AUTOMATIC JOYSTICK/KEYBOARD CONTROL
- ★ ENHANCED SOUND FACILITIES
- ★ TEXT IN ALL MODES, TRUE LOWER CASE ASCII
- ★ REDEFINABLE CHARACTER SET
- ★ MIXED TEXT AND GRAPHICS IN ALL MODES
- ★ AUTO REPEAT KEYBOARD
- ★ DOZENS OF POWERFUL NEW COMMANDS
- ★ SIX FREE DEMONSTRATION PROGRAMS
- ★ COMPREHENSIVE MANUAL

### WHAT THE MAGAZINES SAID

DRAGON WORLD: "Quite simply the best utility on the market"

PCW: "Excellent" and "Superb"

DRAGON USER: "This is a very professional program and can certainly be recommended"

PCN: "Fantastic... if you've got a Dragon, what on earth are you doing without Sprite Magic?"

PCG: "Go out and buy it, it's worth every penny" (They were talking about the full retail price of £17.25)

### ★ ★ SPECIAL OFFER ★ ★

Sprite Magic on Cassette ..... £8.65 all inclusive  
Disc (Dragon DOS only)..... £9.75 all inclusive

★ ★ PLUS FREE with orders received before 30/4/86 ★ ★

### YUMPING YOSSER

Fifteen screens of addictive fun with Yosser in his quest to rescue girl-friend Daisy. You too can be a head-banger!

(Available separately for £2.99 all inclusive)

Send cheque or PO or phone Access/Visa details to:

**KNIGHT SOFTWARE (Dept DU)**  
24 Badger Lane, Ingleby Barwick, Stockton-on-Tees  
Telephone (0642) 762540

## Dragonodos Firmware Memory Map

The Firmware data locations detailed below may be used for other purposes by the Basic ROM when Dragonodos is not installed, for example the USR routines table. Dragonodos also uses RAM from 1536 to 3071, moving graphics page one to address 3072.

234	Floppy Disk Controller Macro Command Byte. This is the byte sent to the hardware to specify what operation is to be performed. See Manufacturers data sheet for details.
235	Disk Drive number (1-4). The drive to be used in a sector read/write operation.
236	Disk Read/Write TRACK.
237	Disk Read/Write SECTOR.
238/239	Disk Read/Write sector Buffer address. This is a 256 byte area of memory from where the sector is to be written, or to where the sector is to be loaded.
240	Floppy Disk Controller Hardware Error Status Byte. This is the error number returned by the hardware to be converted into a Dragonodos error code.
241	Current File Number. The number of file (1-10) most recently accessed.
244	Number of disk drive sides and tracks for current drive. Coding is as follows: 00 = 1 side, 40 tracks 01 = 2 sides, 40 tracks FF = 1 side, 80 tracks FE = 2 sides, 80 tracks The format of a disk is taken from the directory track on the first access to a disk after switch on or reset.
245	File Read/Write Flag. A zero value specifies a file read operation, non-zero specifies file write.
246	Disk I/O in progress flag. A non-zero value signals that disk I/O is continuing and that the motor should not be turned off by the IRQ routine.
1541	Interrupt countdown to disk motor off. The Dragonodos IRQ routine is used to decrement this location if it is not already zero. When it reaches zero the disk motor is switched off.
1544	Disk Auto Verify on/off flag. A non-zero value causes the disk to be read after a write to verify that the data has been saved correctly. A zero value disables this feature. The default setting is ON.
1546	Current default disk drive number (DEFD). This is the drive to be used by operations which do not specify a particular drive number. It is set from basic by

1549/50	the DRIVE command. AUTO command line number. The current line number being used by the AUTO command.
1551/52	AUTO command increment value.
1553	Program LOAD/RUN flag. A zero value indicates that the program is to be loaded, a non-zero value indicates that the program is to be loaded and RUN.
1555	AUTO command on/off flag. A non-zero value indicates that the AUTO command is being used.
1556	ERROR command on/off flag. A non-zero value indicates that the ERROR GOTO trap is active and errors will not cause the program to stop.
1557/58	ERROR trap line number. The Basic line number of the error routine.
1559/60	Line number of last error (ERL).
1561	Error code of last Basic error (ERR).
1618/19	Start address of program loaded.
1620/21	Length of program loaded.
1622/23	Entry address of program loaded (for machine code programs).
1667-86	USR routines address table. The addresses for the 10 USR routines are stored here when Dragonodos is installed.
1687-1706	Drive table: 4 bytes per parameter — 1 per drive:
1687-90	Online flag. A non-zero value indicates that the drive is online and has been accessed.
1691-94	Drive Current Track. If the drive is online, this byte specifies which track the head is currently over.
1695-98	Head stepping rate. This should only be changed if slower drives are used.
1703-06	Disk sectors per track. The number of sectors per track on the disk in the drive.
1725	File IOCB's. 10 (one per open file) each 31 bytes long.
2048	1024 bytes of Disk File Sector Buffers — 256 bytes each.

## Dragonodos Hardware Locations

The Floppy Disk Controller used in the Dragonodos interface is a WD 2797. The following Hex locations are used by the 2797:

FF40	Macro command/Drive status Register.
FF41	Track Register.
FF42	Sector Register.
FF43	Data Register.

The disk motors are controlled by location FF48. A zero value turns off the motors. A non-zero value switches on the motors and selects the particular drive.

## Dragonodos Firmware Routines

The following ROM routines may be used by the machine code programmer. All addresses are in decimal and obviously apply only when Dragonodos is installed.

**Write Sector** Dragonodos 49406  
Writes a sector (256 bytes) out to disk. The locations 235 to 239 must be set up correctly as detailed above on entry. The Z condition code will be clear (BNE) if an error has occurred and the B register will contain the error code.

**Read Sector** Dragonodos 49412  
Reads a sector (256 bytes) from disk. The locations 235 to 239 must be set up correctly as detailed above on entry. Again the Z code will be clear if an error has occurred with the B register containing the code.

**Drive Init** Dragonodos 49509  
Initialises the DOS hardware. On return the status register at \$FF40 will have the following meaning: Bit 1 = Index Input; Bit 6 = Write Protect status.

**Hardware I/O** Dragonodos 49513  
Vector at 49176  
This is a very low-level routine used by Dragonodos to send commands to the hardware. This routine is used by the sector read/write routines. A knowledge of the hardware is required to use this routine. The command byte must be set up in location 234.

**Format Disk** Dragonodos 50108  
Formats the disk in DEFD drive. All data on this disk will be lost, an empty directory will also be set up on the newly formatted disk.

**Get Free Space** Dragonodos 53581  
Vector at 49156  
Returns the amount of free space (in bytes) on the current drive (DEFD) in the Floating Point Accumulator.

**Convert Sector** Dragonodos 54033  
On entry the Y register should contain the logical sector number which is to be converted into a physical track and sector number in locations 236/237. Logical Sectors start at number 0 at track 0, sector 1.

**Directory Disk** Dragonodos 55868  
Produces a directory of the disk in DEFD to the device number in DEVN (location 111), including protection status and free bytes.

**Beep** Dragonodos 56229  
On entry the B register should contain the number of 'beeps' to be output. The beep sound is that produced by the Basic BEEP command.

**Boot Disk** Dragonodos 56330  
Boots an OS off the disk in DEFD. If the disk is not a valid operating system disk (see below) then a BT error is produced, otherwise the OS boot up program is loaded and entered at location 9730. In either case this routine does not return.

**Wait Time** Dragonodos 56267  
On entry the X register should contain the number of milliseconds for the routine to wait before returning. The Break Key is also scanned for.

## Taking chances

IT HAS been said that in no other branch of mathematics is it so easy to blunder as in probability theory, a statement which bitter experience often bears out.

In fact, the probability that a certain event will occur is the number of favourable cases, divided by Total number of equally likely cases. Similarly, the probability that the event will *not* occur will be the number of unfavourable cases divided by Total number of equally likely cases.

For example, the probability of drawing at random, say, a diamond from a full pack will be  $\frac{13}{52}$ , or 0.25, and the probability against will be  $\frac{39}{52}$ , or 0.75. Note that the sum of these two probabilities is 1, so from the definitions a probability of 1 means certainty and a probability of 0 means impossibility.

Difficulty in calculating probability often occurs when a number of factors are combined, and these fall into two main groups: i) The probability of *either* this or that occurring, or ii) The probability of *both* this and that occurring. To take the first instance, we have seen how the probability of drawing a diamond is assessed at .25. Suppose that we wish to calculate the probability of drawing *either* a diamond or a picture card. The temptation is to add the odds for drawing a diamond ( $\frac{1}{4}$ ), to the odds for drawing a picture ( $\frac{3}{13}$ ). This would give the total probability of  $\frac{25}{52}$ , which would be incorrect! Here we have counted *twice* those cards that are both diamonds and pictures. What we need to find is the probability of drawing either a diamond, a club picture, a heart picture, and a space picture. This is given by:  $\frac{1}{4} + \frac{3}{52} + \frac{3}{52} + \frac{3}{52} = \frac{22}{52} = \frac{11}{26}$ . To find the probability *against* simply subtract this value from 1.

The second of our main groups relates to cases where we wish to assess the probability that *both* this and that will occur. To take our card-drawing example we might

wish to calculate the probability of drawing a card which is both a diamond and a picture. In this case we simply multiply the probability of picking a diamond ( $\frac{1}{4}$ ) by the probability of picking a picture ( $\frac{3}{13}$ ). The product,  $\frac{3}{52}$ , gives the answer that we would expect as there are three diamond picture cards in the pack of fifty-two cards. Once again, to find the probability against, simply subtract from 1.

In some problems it is easier to calculate the probability *against* an event, and subtract this from 1 to find the probability *for* the event. For example, if I throw six ordinary dice, what is the probability that I will throw at least one six? Since the probability *against* throwing a six with one die is  $\frac{5}{6}$ , the probability against throwing a single six with six dice will be:  $\frac{5}{6} \times \frac{5}{6} \times \frac{5}{6} \times \frac{5}{6} \times \frac{5}{6} \times \frac{5}{6}$ . This value to 3 decimal places works out at 0.334, and so the probability *for* throwing at least one six would be 1 minus 0.334, that is 0.666.

Before turning to this month's competition question, here is a little problem whose solution I shall give next month. It is a problem which is set in such a way as to mislead the solver in assessing the probabilities involved. You are invited by a friend to participate in a small bet. He shows you three boxes of identical appearance. In the first box are two red marbles, in the second box two white marbles, and in the third are one of each colour. The boxes are closed and are mixed up. You are then invited to choose one of the boxes, and without looking inside, remove one of the marbles. Suppose that it is red, your friend might say 'Obviously, the box that you have chosen is not the one containing the two white marbles so therefore it must be either the red/red or the red/white box. the remaining marble has an equal chance of being red or white. I propose to guess which colour it is, and offer you an even money bet on the

outcome. If I am correct, I win. If I am wrong, I lose! Would you be wise to accept the bet?

For this month's competition, as a demonstration in probabilities, I assembled a number of volunteers into a room and handed to each one of them a slip of paper. They were then asked to write down any year in the range 1 to 1986 inclusive. This was to be done secretly without consultation with the others present. The papers were then collected. I knew from the number of volunteers present that there was a slightly *less* than evens chance of any two numbers being the same, but that if I also wrote down a date and added it to the pile the probability would rise to a *better* than evens chance. In other words, the addition of one extra number would increase the probability of at least two dates coinciding from just under 0.5 to just over this value.

Can you say how many volunteers there were? As a clue, there are fewer than you might, at first sight, think!

### Prize

For this month, we are offering 15 prizes of the newest game for the Dragon... from the newest software house: Beanstalker from Micro Vision. In this 60 screen arcade adventure, you must collect treasure in Giantland, avoiding such hazards as giant caterpillars, giant insects and man-sized birds. You've seen the pantomime, now play the game!

### Rules

To win your own copy of Bean Stalker, all you have to do is put your brain into gear and work out the answer to this month's puzzle — showing how you solved it. But please don't send us cassettes containing your program — hard copies only.

Make sure that your name and address

is clearly printed on your entry, and mark your envelope "April Competition" ... or you might risk disqualification.

As a tie breaker, complete the following sentence in 10 words or less: "I want to visit Giantland because ...". As usual, preference will be given to entries that make the editorial staff giggle.

### January winners

The 20 lucky winners of the Melbourne House 'Enter the Dragon' cassettes are as follows: Mark Lister of Laycock, West Yorkshire, R. G. Woods of Ilford, Essex, Charles Daly of Windsor Hill, Co. Cork, Simon Aubury of Swindon, Wilts, G. R. Barber of Sutton Coldfield, West Midlands, P. D. Maddocks of Taplow, Berks, M. Clarkson of Chelmsford, Essex,

Chris Jolly of Grove Park, London, K. Lightowler of Halifax, D. R. Sharples of Merseyside, Luis Martinez of San Sebastian, Spain, Stephen Hunter of Highfield, Southampton, E. A. Newman of Addlestone, Surrey, J. Taylor of Acklam, Middlesbrough, P. L. Bates of St Albans, Cayuela Simon of Blois, France, D. C. Faulkner of Maesycoed, Mid Glamorgan, Geoffrey Marshall of Belper, Derby, and J. J. Randell of Plumstead, London. Congratulations one and all.

Entries for the tie break ("1986 is the Year of the Dragon because ...") included many references to St George — oblique and otherwise, but generally our favourite was E. A. Newman's, "because it will be a roaring one."

I hope he was referring to the hot summer we are all praying for!
